Key to Poster Floor by Themes

The poster floor begins with Theme A in Hall C and ends with Theme J in Hall A. Refer to the poster floor map at the end of this booklet.

Theme

- ADevelopment
- B.....Neural Excitability, Synapses, and Glia
- CNeurodegenerative Disorders and Injury
- DSensory Systems
- E.....Motor Systems
- F.....Integrative Physiology and Behavior
- G....Motivation and Emotion
- HCognition
- I.....Techniques
- J.....History and Education

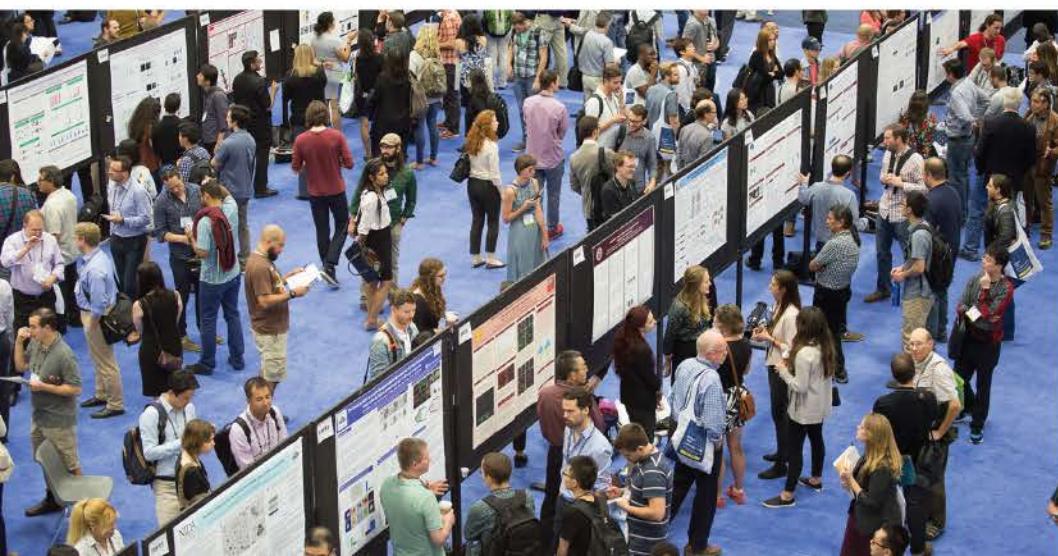

NOTE: Theme J Posters will be on display in Hall A beginning at 1 p.m. on Saturday, Nov. 11, and will remain posted until 5 p.m., Sunday, Nov. 12. One-hour presentations will occur either Saturday afternoon or Sunday morning.

Code of Conduct at SfN Events

SfN is committed to supporting discovery and scientific dialogue, and to fostering a welcoming community in which all scientists are able to contribute fully. The Society asserts that sexual harassment and other harassing behaviors have no place in a healthy scientific enterprise. We expect all attendees, media, speakers, volunteers, organizers, venue staff, guests, and exhibitors at SfN-organized events to help us ensure a safe and positive environment. At the convention center, onsite medical and security personnel are available directly or through the SfN headquarters office.

If attendees experience unwelcome or unsafe situations anywhere in the city, attendees should swiftly contact local authorities (dial 9-1-1), and additional local social services resources are listed in one convenient location at the federal website www.changingourcampus.org. Any official report of sexual harassment should be brought to the designated Human Resources Officer in the SfN headquarters office at each meeting convention center, or sent via email to hrofficer@sfn.org. The HR Officer will facilitate the completion of a report by a complainant.

For more information on SfN's policy, please go to: www.sfn.org/Member-Center/Professional-Conduct/Code-of-Conduct-at-SfN-Events.

LECTURE Walter E. Washington Convention Center

094. ● Molecular Architecture of the Circadian Clock in Mammals — CME

Sun. 8:30 AM - 9:40 AM — Hall D

Speaker: J. S. TAKAHASHI, *Univ. of Texas Southwestern Med. Ctr. and Howard Hughes Med. Inst.*

Circadian rhythms are an adaptation to the cyclic environment on Earth. In animals, circadian behavior can be analyzed as an integrated system, beginning with genes and ultimately leading to behavioral outputs. The mechanism of circadian clocks in mammals is cell autonomous and generated by a set of genes forming a transcriptional autoregulatory feedback loop. The cellular autonomy of clocks has raised a number of questions concerning synchronization and coherence of rhythms at the cellular level as well as circadian organization at the systems level.

SYMPORIUM Walter E. Washington Convention Center

095. The Role of RNA Biology in Neurological Disease — CME

Sun. 8:30 AM - 11:00 AM — Ballroom A

Chair: W. DUAN

It has been increasingly recognized that RNA plays a pivotal role in the regulation of gene expression and neuronal function. This symposium will highlight advances in RNA biology and discuss the roles of RNA in neurological diseases, including repeat associated non-ATG translation, RNA metabolism, non-coding regulatory RNAs, and splicing factors. The symposium will provide new perspectives on how RNA biology impacts strategies for therapeutic development in neurological diseases.

8:30 **95.01** Introduction.

8:35 **95.02** Repeat associated non-ATG (RAN) translation: New starts and directions in neurological disease. L. P. RANUM. *Univ. of Florida.*

9:10 **95.03** Disturbance of dynamic RNA-protein assemblies in neurological diseases. J. TAYLOR. *St. Jude Children's Research Hosp.*

9:45 **95.04** Small regulatory RNAs in brain disorders. P. JIN. *Emory Univ. Sch. of Med.*

10:20 **95.05** Splicing factors in neurodegenerative disease. R. REED. *Harvard Med. Sch.*

10:55 **95.06** Closing Remarks.

SYMPORIUM Walter E. Washington Convention Center

096. ● Developmental Origins of Neuronal Diversity in the Cerebral Cortex — CME

Sun. 8:30 AM - 11:00 AM — Ballroom B

Chair: O. MARIN

The function of the cerebral cortex relies on a large variety of cell types, yet the developmental origins of this diversity are largely unknown. The symposium will discuss the role of developmental mechanisms in the generation of cellular diversity in the cortex of mice and humans. The session will focus on current efforts to reveal the diversity of progenitor cells and the identity of neuron-specific transcriptional programs as they dynamically unfold during development.

8:30 **96.01** Introduction.

8:35 **96.02** ● Transcriptional regulation of MGE-derived cell fate: cortical interneurons. J. L. RUBENSTEIN. *Univ. of California San Francisco.*

9:10 **96.03** ● Molecular regulation of cortical interneuron diversity. O. MARIN. *King's Col. London.*

9:45 **96.04** ● An integrative census of cell types during human cortical neurogenesis. A. R. KRIEGSTEIN. *Univ. of California San Francisco.*

10:20 **96.05** Cortical interneuron diversity from a wiring perspective. B. RICO. *King's Col. London.*

10:55 **96.06** Closing Remarks.

MINISYMPORIUM Walter E. Washington Convention Center

097. Big News From a Little Region: Hippocampal Area CA2 — CME

Sun. 8:30 AM - 11:00 AM — Ballroom C

Chair: S. M. DUDEK

Known to be resistant to cell death, neurons in hippocampal area CA2 have only recently been appreciated as having distinct synaptic and firing properties and playing distinct roles in behavior such as social recognition and aggression. In this minisymposium, speakers will discuss how CA2 may be important in diseases such as schizophrenia and epilepsy as well as provide attendees with an overview of this small but exciting module of the hippocampus and its relation to many brain functions.

8:30 **97.01** Introduction.

	The peripheral nervous system (PNS) and immune system actively communicate to regulate homeostasis and inflammation in health and disease. Nodose/jugular ganglia and DRG sensory neurons detect immune and bacterial mediators to signal danger, and release neuropeptides that regulate immunity. Vagal autonomic neurons potently modulate immune cell activation in sepsis, arthritis, colitis, and other inflammatory conditions. Thus, defining peripheral neuro-immune signaling can improve treatment of inflammatory diseases.

LECTURE Walter E. Washington Convention Center**101. Using Memory to Guide Decisions — CME**

Sun. 10:00 AM - 11:10 AM — Hall D

Speaker: D. SHOHAMY, Columbia Univ.

From robots to humans, the ability to learn from experience turns a rigid response system into a flexible, adaptive one. This lecture will discuss the neural and cognitive mechanisms by which learning shapes decisions. The lecture will focus on how multiple brain regions interact to support learning, what this means for how memories are built, and the consequences for how decisions are made. Results emerging from this work challenge the traditional view of separate learning systems and advance understanding of how memory biases decisions in both adaptive and maladaptive ways.

LECTURE Walter E. Washington Convention Center**102. Carving the World Into Useful Task Representations — CME**

Sun. 11:30 AM - 12:40 PM — Hall D

Speaker: Y. NIV, Princeton Univ.

Studies in reinforcement learning have famously explained the role of dopamine in learning. However, reinforcement learning relies on representations of tasks as a sequence of "states." Where do these states come from? This lecture will first demonstrate that by learning the latent structure of a task, animals and humans form a state of space through experience. The lecture will then show that the frontoparietal attention network interacts with valuation in the basal ganglia to learn these representations. Finally, the lecture will suggest that the orbitofrontal cortex represents a cognitive map of learned states for decision-making.

124. Epilepsy: Anticonvulsant Therapies: Novel interventions, strategies, and mechanisms					
<i>Theme B: Neural Excitability, Synapses, and Glia</i>					
Sun. 8:00 AM – <i>Walter E. Washington Convention Center, Halls A-C</i>					
8:00	F9	124.01 ● Cannabidiol (CBD) interrupts a novel positive feedback loop involving LPI-GPR55 signaling to restore excitatory-to-inhibitory coordination. E. C. ROSENBERG*; M. BAZELOT; A. SALAH; B. WHALLEY; O. DEVINSKY; R. W. TSIEN. <i>NYU Sch. of Med., Univ. of Reading, NYU Sch. of Med.</i>	8:00	G8	124.12 Activity clamp is a new tool to study epileptic mechanisms. G. LIGNANI*; G. MORRIS; M. LEITE; D. KULLMANN; I. PAVLOV; S. SCHORGE. <i>UCL Inst. of Neurology.</i>
9:00	F10	124.02 ● Involvement of GABA _A R and NMDAR in the anticonvulsant actions of cannabidiol - studies in human cortex and rodent entorhinal cortex <i>in vitro</i> . B. HENLEY*; R. A. GRAY; S. GREENHILL; I. M. STANFORD; G. L. WOODHALL. <i>Aston Univ., GW Pharmaceuticals.</i>	9:00	G9	124.13 ● Unilateral encapsulated cell biodelivery of GDNF into the hippocampus inhibits epileptic seizures in rats. E. MELIN*; A. NANOBASHVILI; D. EMERICH; J. TORNØE; M. SIMONATO; L. U. WAHLBERG; M. KOKAIA. <i>Epilepsy Ctr., NsGene, Inc., Univ. Ferrara, Epilepsy Ctr.</i>
10:00	F11	124.03 Anti-seizure and biophysical effects of microRNA-134 knockdown. G. MORRIS*; S. SCHORGE. <i>Univ. Col. London.</i>	9:00	G10	124.14 ● Comprehensive high-throughput drug screening in a cellular model of KCNQ2 epileptic encephalopathy. G. R. STEWART*; C. M. MAHER; B. C. GAY; J. M. ANDRESEN; A. C. GERLACH; S. PETROU; D. GOLDSTEIN. <i>Pairnomix, Icagen, Univ. of Melbourne, Columbia Univ.</i>
11:00	F12	124.04 Bumetanide enhances the pharmacological effect of phenobarbital on behavioral level, in an animal model of temporal lobe epilepsy. C. A. MANTELLERO*; J. AMARO; M. BORQUEZ; A. OCAMPO; J. VALDES; P. ROJAS. <i>Univ. De Santiago De Chile, Univ. de Chile.</i>	10:00	H1	124.15 Cox2 inhibition ameliorate seizure susceptibility in a mouse model of autosomal dominant lateral temporal epilepsy. Y. SHEN*; L. ZHOU; L. ZHOU. <i>Zhejiang Univ. Sch. Med., Zhejiang Univ. Sch. of Med., Zhejiang Univ.</i>
8:00	G1	124.05 Indigenous bacteria of the gut microbiota mediate antiseizure effects of the ketogenic diet. C. OLSON*; H. E. VUONG; J. M. YANO; Q. Y. LIANG; D. J. NUSBAUM; E. Sunday PM

LECTURE Walter E. Washington Convention Center

177. Genetic Dissection of Neural Circuit Assembly and Organization — CME

Sun. 1:00 PM - 2:10 PM — Hall D

Speaker: L. LUO, *Stanford Univ. and Howard Hughes Med. Inst.*

This lecture will discuss recent work on the development and function of neural circuits in flies and mice. Discussion of development will focus on cellular and molecular mechanisms that mediate the establishment of wiring specificity between pre- and postsynaptic partners. Discussion of function will focus on applications of viral-genetic tracing and TRAP methods we developed to interrogate circuits involved in neuromodulation and remote memory.

SYMPOSIUM Walter E. Washington Convention Center

178. Neuroimmune Interactions: A Status Change — CME

Sun. 1:30 PM - 4:00 PM — Ballroom A

Chair: J. IVAN ALVAREZ
Co-Chair: J. KIPNIS

Identifying the mechanisms regulating the influence of the immune system on the nervous system is critical to understanding brain health, behavior, cognition, and disease processes. In this symposium, a panel of expert scientists will describe how peripheral immune elements activate unique signaling pathways regulating neuronal function and how unique neurointrinsic signals shape the activity of leukocytes entering the central and peripheral nervous systems during homeostasis and disease.

179. Cortical Plasticity Following Sensory Loss and Restoration — CME

Sun. 1:30 PM - 4:00 PM — Ballroom B

Chair: S. G. LOMBER
Co-Chair: A. AMEDI

Studies of sensory loss and restoration are changing traditional views of cortical organization. Integrating animal and human models, as well as insights from the study of blindness and deafness, this symposium will discuss mechanisms of crossmodal plasticity in visual and auditory cortices throughout the lifespan, the role of critical periods, impact on perception and cognition, and how these changes influence the outcomes of sensory prosthetics.

180. New Breakthroughs in Understanding the Role of Functional Interactions Between the Neocortex and the Claustrum — CME

Sun. 1:30 PM - 4:00 PM — Ballroom C

Chair: S. P. BROWN
Co-Chair: B. N. MATHUR

The claustrum is highly interconnected with almost all areas of the neocortex, yet the function of this corticoclastral system has largely remained mysterious. Recent work has sparked new hypotheses regarding the corticoclastral system based on analyses from the microcircuit to the behavioral level. This minisymposium will bring together a diverse array of researchers to discuss emerging views of the claustrum's influence on cortical activity and its role in cognitive function.

MINISYMPOSIUM Walter E. Washington Convention Center**181. Emerging Mechanisms Underlying Dynamics of GABAergic Synapses — CME**

Sun. 1:30 PM - 4:00 PM — 145B

Chair: S. K. TYAGARAJAN
Co-Chair: A. MAFFEI

In recent years it has emerged that GABAergic inhibition is flexible, allowing input-specific adaptations at excitatory connections. This minisymposium will address several novel mechanisms for "plastic" GABAergic neurotransmission and highlight mechanisms that are operational during development and in mature neuronal circuits. This event will also showcase a tight molecular interplay between glutamatergic and GABAergic neurotransmission systems.

MINISYMPOSIUM Walter E. Washington Convention Center**182. ● Advances in Parkinson's Disease Biomarkers and Disease Modeling — CME**

Sun. 1:30 PM - 4:00 PM — 146A

Chair: M. L. SUTHERLAND
Co-Chair: D. J. STONE

Parkinson's disease (PD), a chronic movement disorder with no cure, is benefiting from coordinated efforts around high-quality, standardized clinical data acquisition and biosample collections that are being broadly shared with the research community to promote biomarker development and disease modeling. Academic and industry researchers will highlight advances in PD genetics, imaging, transcriptomics, wearable technology, and data integration.

MINISYMPOSIUM Walter E. Washington Convention Center**183. The Science of Storytelling and Storytelling in Science**

Sun. 1:30 PM - 4:00 PM — 151B

Chair: P. L. CROXSON
Co-Chair: D. SCHILLER

Now more than ever, it is essential that scientists actively engage with the public. Through storytelling, the use of a personal narrative to bring science to life, we can improve communication not only with the public, but also within the community, promoting better scientific progress. Through presentations about the science of storytelling, why and how to do it, and three powerful personal stories, this session aims to demonstrate how storytelling can transform science communication.

184. PETER AND PATRICIA GRUBER LECTURE: Assembling Neural Circuits: Cells and Synapses

Sun. 2:30 PM - 3:40 PM — Hall D

Speaker: J. R. SANES, *Harvard Univ.*

Support contributed by: *The Gruber Foundation*

The retina is emerging as a leading model system for elucidating mechanisms that govern neural circuit assembly and function. Visual information is passed from retinal photoreceptors to interneurons to retinal ganglion cells (RGCs) and finally to the rest of the brain. Each of the more than 40 types of RGCs responds to specific visual features, and the features to which each RGC type responds depend on which of the more than 70 types of interneurons synapse on it. This lecture will describe genetic, morphological, and physiological studies that have led to identification of some molecules and mechanisms that underlie assembly of these circuits. The lecture will then discuss new molecular methods that are enabling a comprehensive cataloging of neuronal cell types and the recognition molecules they use.

185. PRESIDENTIAL SPECIAL LECTURE: Illuminating Neurobiology at the Nanoscale and Systems Scale by Imaging — CME

Sun. 5:15 PM - 6:30 PM — Hall D

Speaker: X. ZHUANG, *Harvard Univ. and Howard Hughes Med. Inst.*

Support contributed by: *Janssen Research & Development LLC*

Imaging has helped to advance many areas of neurobiology. This lecture will describe super-resolution imaging methods that allow fluorescence imaging of cells and tissues with nanometer-scale resolution, as well as discoveries of novel cellular structures in neurons enabled by this approach. The lecture will also highlight a single-cell transcriptome imaging approach that allows the expression of thousands of genes to be profiled *in situ* in a spatially resolved manner. The application of this method to neurobiology studies will also be discussed.

1:00	QQ19 249.01 Modeling of preference reversal in a temptation task. T. RAHIMI-MOGHADDAM*; J. HWANG; E. E. EMERIC; V. STUPHORN. <i>Johns Hopkins Univ.</i>
2:00	QQ20 249.02 Neural mechanism underlying multi-attribute decision making in primates. Y. YANG*; K. JUSTUS; E. NIEBUR; V. STUPHORN. <i>Johns Hopkins Univ., Johns Hopkins Univ., Johns Hopkins Univ.</i>
3:00	QQ21 249.03 Conditional GSK3 β KO in GABAergic parvalbumin interneurons differentially affects behaviors in adult male and female mice. S. MONACO*; A. J. MATAMOROS; G. HAN; E. M. BLACK; R. A. ESPAÑA; W. GAO. <i>Drexel Univ. Col. of Med.</i>
4:00	QQ22 249.04 Role of the superior colliculus in value-base decisions during a saccade foraging task. B. ZHANG*; J. Y. KAN; M. DORRIS. <i>Inst. of Neurosci., Queen's Univ.</i>
1:00	RR1 249.05 Effects of estrogen on attention and monoamines in the prefrontal cortex of the female rat. D. J. MOKLER*; S. C. CHEN; S. KOLANGARA; T. NEWELL; J. A. MCGAUGHEY. <i>Univ. of New England, Univ. of New England, Univ. of New Hampshire</i> .

2:00	RR2	249.06 ▲ Effects of a “junk-food” diet and a high fat diet on working memory and prefrontal cortex protein expression in Sprague Dawley rats. D. OBIRI-YEBOAH; C. L. WINGROVE; P. J. VOLLBRECHT*. <i>Hope Col.</i>	4:00	RR16	249.20 Prefrontal nicotinic- and NMDA-receptor activity is necessary for performance in a task of cognitive flexibility in rats. D. PHENIS*; V. VALENTINI; J. P. BRUNO. <i>The Ohio State Univ., Univ. of Cagliari.</i>
3:00	RR3	249.07 Unsupervised nonlinear dimensionality reduction of large-scale neural recordings in prefrontal cortex. M. R. WHITEWAY*; R. BARTOLO; B. B. AVERBECK; D. A. BUTTS. <i>Univ. of Maryland, NIMH/NIH, Univ. of Maryland, Univ. of Maryland.</i>	1:00	RR17	249.21 Fine patterns of prefrontal connections mapped by electrical microstimulation and fMRI in the macaque. R. XU*; N. P. BICHOT; P. K. WEIGAND; A. TAKAHASHI; R. DESIMONE. <i>MIT.</i>
4:00	RR4	249.08 Dimensionality reduction and dynamic encoding in PFC during context-dependent decision making. M. C. AOI*; V. MANTE; J. PILLOW. <i>Princeton Univ., Inst. of Neuroinformatics.</i>	2:00	RR18	249.22 Action-outcome encoding in dorsomedial prefrontal cortex. B. A. BARI; C. D. GROSSMAN; R. K. NIYOGI; J. Y. COHEN*. <i>Johns Hopkins Univ.</i>
1:00	RR5	249.09 Instability of neural trajectories in medial frontal cortex predicts individual differences in perceptual decision making. T. KURIKAWA*; T. HANNA; T. FUKAI. <i>RIKEN, Brain Sci. Inst., Dept. Behavior and Brain Organization, Caesar, RIKEN.</i>	3:00	RR19	249.23 Neural signature of Bayesian interval timing in dorsomedial frontal cortex. H. SOHN*; D. NARAIN; M. JAZAYERI. <i>MIT, MIT.</i>
2:00	RR6	249.10 How much do changes in movement or spatial location impact anterior cingulate cortex (ACC) neurons? A. HARATIKIA*; A. LINDSAY; N. J. POWELL; J. SEAMANS. <i>Univ. of British Columbia, Univ. of British Columbia, Univ. of British Columbia.</i>	4:00	RR20	249.24 Neonatal Ventral Hippocampal Lesioned (NVHL) rats show attentional deficits on a delayed alternation task. N. J. POWELL*; J. K. SEAMANS. <i>Univ. of British Columbia, UBC.</i>
3:00	RR7	249.11 The medial prefrontal cortex modulates spatial working memory in the T-maze through strategic neuronal encoding. Y. YANG*; R. B. MAILMAN. <i>Penn State Univ.</i>			POSTER
4:00	RR8	249.12 ▲ Prefrontal cortex GIRK channel function in cognitive deficits associated with chronic stress and depression. S. LOKE*; D. GOMEZ; E. MARRON FERNANDEZ DE VELASCO; K. WICKMAN; M. C. HEARING. <i>Marquette Univ., Marquette Univ., Univ. of Minnesota, Marquette Univ.</i>			250. Prefrontal Cortex and Reward
1:00	RR9	249.13 Noradrenergic modulation of premotor cortex during decision execution. E. M. RODBERG*; C. R. DEN HARTOG; M. A. KELBERMAN; E. M. VAZEY. <i>Univ. of Massachusetts Amherst.</i>			Theme H: Cognition
2:00	RR10	249.14 Npas4-deficient mice lack cellular resilience against mild stress in adolescence and show impaired cognitive flexibility in adulthood. C. PAGE*; J. ALEXANDER; L. COUTELLIER. <i>The Ohio State Univ., The Ohio State Univ., The Ohio State Univ.</i>			Sun. 1:00 PM – <i>Walter E. Washington Convention Center, Halls A-C</i>
3:00	RR11	249.15 Adapting choice behavior and neural value coding in monkey orbitofrontal cortex. J. ZIMMERMANN*; P. W. GLIMCHER; K. LOUIE. <i>New York Univ., New York Univ.</i>	1:00	RR21	250.01 Adolescent binge-like ethanol exposure differentially affects probabilistic reversal learning in Long-Evans versus Sprague-Dawley rats. S. C. GARR*; J. T. GASS; S. B. FLORESCO; L. CHANDLER. <i>Med. Univ. of South Carolina, Med. Univ. South Carolina, Univ. British Columbia, Med. Univ. S Carolina.</i>
4:00	RR12	249.16 Neuronal activity in orbitofrontal cortex during economic decisions under sequential offers. S. N. BALLESTA*; C. PADOA-SCHIOPPA. <i>Washington Univ.</i>	2:00	RR22	250.02 Local-field oscillatory activity in the medial prefrontal cortex responds to the execution of effortful behavior but not to the anticipation of effort or reward. L. CROWN*; D. A. NITZ; S. L. COWEN. <i>Univ. of Arizona, Univ. of California San Diego, Univ. of Arizona.</i>
1:00	RR13	249.17 Confidence representations across sensory modalities in orbitofrontal cortex. T. OTT*; P. MASSET; J. HIROKAWA; A. KEPECS. <i>Cold Spring Harbor Lab., Watson Sch. of Biol. Sci.</i>	3:00	RR23	250.03 Amygdala input differentially influences prefrontal local field potential and single neuron encoding of reward-based decisions. F. M. STOLL*; C. P. MOSHER; S. TAMANG; E. A. MURRAY; P. H. RUDEBECK. <i>Icahn Sch. of Med. At Mount Sinai, NIMH, NIH.</i>
2:00	RR14	249.18 Top-down attention modulates activity of value-encoding orbitofrontal neurons. Z. ZHANG*; Y. XIE; T. YANG. <i>Inst. of Neuroscience, Chinese Acad. of Scie.</i>	4:00	RR24	250.04 Representation of reward risk by primate frontal eye field neurons. X. CHEN*; M. ZIRNSAK; T. MOORE. <i>Stanford Univ. Sch. of Med., Howard Hughes Med. Institute, Stanford Univ. Sch. of Medicine, Stanford.</i>
3:00	RR15	249.19 Functional assessment of large scale cortical networks during multi-sensory decision-making. S. MUSALL*; S. GLUF; A. K. CHURCHLAND. <i>Cold Spring Harbor Lab.</i>	1:00	RR25	250.05 Neurons in orbitofrontal cortex adapt differently to changes in maximum and minimum value. K. CONEN*; C. PADOA-SCHIOPPA. <i>Washington Univ. In St Louis, Washington Univ. In St Louis.</i>
			2:00	RR26	250.06 Reinforcement learning drives overrepresentation of subjective value in frontostriatal brain networks. E. B. KNUDSEN*; J. D. WALLIS. <i>Univ. of California Berkeley.</i>
			3:00	RR27	250.07 Value-based decision making in the nematode <i>Caenorhabditis elegans</i> . S. R. LOCKERY*; A. KATZEN; P. W. GLIMCHER; W. HARBAUGH. <i>Univ. of Oregon, New York Univ. Ctr. for Neural Sci.</i>

4:00	RR28	250.08	Differential routing of reinforcement signals from orbitofrontal cortex to striatum depending on environmental uncertainty. J. HIROKAWA*; S. LI; A. VAUGHAN; J. L. PIE; L. DESBAN; Y. OSAKO; T. OHNUKI; H. MANABE; Y. SAKURAI; A. KEPECS. <i>Doshisha Univ., Cold Spring Harbor Lab.</i>	2:00	SS3	251.02	Neural mechanisms mediating cooperation. W. S. ONG*; M. L. PLATT. <i>Univ. of Pennsylvania, Univ. of Pennsylvania.</i>
1:00	RR29	250.09	Differential effects of dorsal and ventral mPFC inactivation are driven by reward availability. J. P. CABALLERO*; D. E. MOORMAN. <i>Univ. of Massachusetts Amherst, Univ. of Massachusetts Amherst.</i>	3:00	SS4	251.03	● modeling behavior of non-human primates in an iterative chicken game. X. LI*; W. S. ONG; C. CAMERER; M. L. PLATT. <i>Caltech, Univ. of Pennsylvania, Caltech, Univ. of Pennsylvania.</i>
2:00	RR30	250.10	Neural circuits for working memory and reinforcement learning in primate prefrontal and parietal cortex. S. K. MURRAY*; D. LEE; H. SEO. <i>Yale Univ., Yale Sch. of Med., Yale Sch. of Med.</i>	4:00	SS5	251.04	Dorsal prefrontal cortex tracks projected outcomes in a dynamic competitive game. J. M. PEARSON*; S. N. IQBAL; C. B. DRUCKER; J. GARIEPY; M. L. PLATT. <i>Duke Univ., Duke Univ., Univ. of Pennsylvania.</i>
3:00	RR31	250.11	● Modeling the dynamic effects of reward and temporal uncertainty in perceptual decision making. M. SHINN*; H. SEO; D. EHRLICH; D. LEE; J. D. MURRAY. <i>Yale Univ., Yale Sch. of Med., Yale Sch. of Med.</i>	1:00	SS6	251.05	Pupil size supports a comparison-to-reference choice mechanism in a sequential gambling task. T. CASH-PADGETT*; H. AZAB; S. YOO; B. Y. HAYDEN. <i>Univ. of Rochester, Univ. of Rochester.</i>
4:00	RR32	250.12	Reinforcement learning of motor sequences on motor primitives acquired in the convolutional network-based neocortical model. H. KURASHIGE*; T. YAMAZAKI. <i>The Univ. of Electro-Communications.</i>	1:00	DP13/SS7	251.06	(Dynamic Poster) Using Generative Adversarial Networks to estimate agent goals in a Pac-man-like virtual hunting experiment. S. YOO*; S. IQBAL; B. Y. HAYDEN; J. M. PEARSON. <i>Univ. of Rochester, Duke Univ., Univ. of Rochester.</i>
1:00	RR33	250.13	Neuronal ensembles in monkey dorsolateral prefrontal and inferior parietal cortices track reward predictions and outcomes in a probabilistic non-decision paradigm. N. C. FOLEY*; N. M. SINGLETARY; J. GOTTLIEB. <i>Columbia Univ.</i>	3:00	SS8	251.07	Evidence for a comparison-to-reference mechanism of economic choice in the dorsal anterior cingulate cortex. H. AZAB*; B. Y. HAYDEN. <i>Univ. of Rochester.</i>
2:00	RR34	250.14	Robust encoding of reward expectation in low beta band power in monkey dorsolateral prefrontal and inferior parietal lobe. M. NEJATBAKHSH; H. R. NASRABADI; V. DAVOODNIA; E. ZABEH; N. C. FOLEY; R. LASHGARI; J. P. GOTTLIEB*. <i>Inst. for research in Fundamental Sci. (IPM), Columbia Univ., Columbia Univ. Med. Ctr.</i>	4:00	SS9	251.08	● A scalar sampling race model predicts risk preference in primates. B. R. EISENREICH*; B. Y. HAYDEN. <i>Univ. of Rochester, Univ. of Rochester.</i>
3:00	RR35	250.15	Dynamics of the reward signal in the primary motor cortex. A. TARIGOPPULA*; J. P. HESSBURG; D. B. MCNIEL; J. S. CHOI; J. T. FRANCIS. <i>SUNY Downstate Med. Ctr., New York Univ., Uni. of Houston.</i>	1:00	SS10	251.09	Strategic value encoding in ventromedial prefrontal cortex guides foraging behavior. P. MEHTA*; B. Y. HAYDEN. <i>Univ. of Rochester Brain and Cognitive Scienc.</i>
4:00	RR36	250.16	Distinguishing between the contributions of depletion of processing resources and increases in opportunity costs to decline in attentional performance. K. B. PHILLIPS*; M. SARTER. <i>Univ. of Michigan, Univ. of Michigan Dept. of Psychology.</i>	2:00	SS11	251.10	Understanding the common underlying neural principles between neuroeconomic decisions and stopping. P. BALASUBRAMANI*; B. Y. HAYDEN. <i>Univ. of Rochester, Univ. of Rochester.</i>
1:00	SS1	250.17	Interactions of attentional capture and craving in smokers during a perceptual decision task. J. A. HARRIS*; S. E. DONOHUE; K. LOEWE; H. HEINZE; M. G. WOLDORFF; M. A. SCHOENFELD. <i>Otto-von-guericke-Universität Magdeburg, Otto-von-Guericke Univ., Otto-von-Guericke Univ., Duke Univ., Kliniken Schmieder.</i>	3:00	SS12	251.11	The avian prefrontal cortex revisited. K. VON EUGEN*; S. TABRIK; F. STRÖCKENS; O. GÜNTÜRKÜN. <i>Ruhr-University Bochum.</i>
2:00	SS2	251.01	Predicting strategic behavior in a competitive two-player game from gaze patterns and neuronal activity in the superior temporal sulcus. Y. JIANG; M. L. PLATT*. <i>Univ. of Pennsylvania, Univ. of Pennsylvania.</i>	4:00	SS13	251.12	Distinct fronto-parietal communication channels for separating targets and distractors in working memory. S. N. JACOB*; D. HÄHNKE; A. NIEDER. <i>Technische Univ. München, Univ. Tuebingen.</i>
3:00				1:00	SS14	251.13	The mediodorsal thalamus contributes to decision making after abstract rule switches. A. S. MITCHELL*; S. CHAKRABORTY; A. BELL; J. SALLET; D. J. MITCHELL; S. MASON; M. BUCKLEY; Z. OUHAZ. <i>Univ. of Oxford, MRC Cognition and Brain Sci. Unit.</i>
4:00				2:00	SS15	251.14	Anterior cingulate cortex lesions abolish budget effects on demand elasticities in rat consumers. T. KALENSCHER*; S. SCHÄBLE; M. VAN WINGERDEN; Y. HU. <i>Univ. of Duesseldorf.</i>
				3:00	SS16	251.15	Piglets exhibit different discriminative strategies to choose an object in a novel test method to evaluate inference by exclusion. P. PAREDES-RAMOS*. <i>Facultad de Medicina Veterinaria y Zootecnia.</i>
				4:00	SS17	251.16	Contributions of the lateral orbital area to economic decisions in mice. M. KUWABARA*; N. KANG; G. BLACK; T. HOLY; C. PADOA-SCHIOPPA. <i>Washington Univ. In St Louis.</i>

POSTER**251. Prefrontal Cortex and Decision Making****Theme H: Cognition**

Sun. 1:00 PM – Walter E. Washington Convention Center, Halls A-C

- 1:00 SS2 **251.01** Predicting strategic behavior in a competitive two-player game from gaze patterns and neuronal activity in the superior temporal sulcus. Y. JIANG; M. L. PLATT*. *Univ. of Pennsylvania, Univ. of Pennsylvania.*

* Indicated a real or perceived conflict of interest, see page 137 for details.

▲ Indicates a high school or undergraduate student presenter.

* Indicates abstract's submitting author

- 1:00 SS18 **251.17** What, if anything, is the rodent prefrontal cortex? T. K. SWANSON*; S. R. WHITE; A. T. DEMARCO; S. P. WISE; M. LAUBACH. *American Univ., American Univ., Georgetown Univ., NIMH Retired, American Univ.*
- 2:00 SS19 **251.18** Spatial and temporal distribution of value-related and the visual information in the macaque lateral prefrontal cortex. S. TANAKA*; K. KAWASAKI; I. HASEGAWA; T. SUZUKI; M. KAWATO; M. SAKAGAMI. *Tamagawa Univ. Brain Sci. Inst., Niigata Univ. Med. Sch., Niigata Univ. Sch. of Med., Natl. Inst. of Information and Communications Technol., ATR BICR.*
- 3:00 SS20 **251.19** The dynamics of expectation build-up and its integration with stimulus evidence during perceptual discrimination. A. HERMOSO MENDIZABAL*; A. HYAFIL; P. E. RUEDA-OROZO; S. JARAMILLO; D. M. ROBBE; J. DE LA ROCHA. *IDIBAPS, Ctr. for Brain and Cognition, Inst. De Neurobiología, UNAM, Univ. of Oregon, Inst. de Neurobiologie de la Méditerranée.*
