NOTE: Theme J Posters will be on display in Hall B beginning at 1 p.m. on Saturday, Nov. 3, and will remain posted until 5 p.m., Sunday, Nov. 4. One-hour presentations will occur either Saturday afternoon or Sunday morning.

Code of Conduct at SfN Events

SfN is committed to supporting discovery and scientific dialogue, and to fostering a welcoming community in which all scientists are able to contribute fully. The Society asserts that sexual harassment and other harassing behaviors have no place in a healthy scientific enterprise. We expect all attendees, media, speakers, volunteers, organizers, venue staff, guests, and exhibitors at SfN-organized events to help us ensure a safe and positive

environment. At the convention center, onsite medical and security personnel are available directly or through the SfN headquarters office.

If attendees experience unwelcome or unsafe situations anywhere in the city, attendees should swiftly contact local authorities (dial 9-1-1), and additional local social services resources are listed in one convenient location at the federal website www.changingourcampus.org. Any official

report of sexual harassment should be brought to the designated Human Resources Officer in the SfN headquarters office at each meeting convention center, or sent via email to hrofficer@sfn.org. The HR Officer will facilitate the completion of a report by a complainant.

For more information on SfN's policy, please go to: sfn.org/Membership/Professional-Conduct/Code-of-Conduct-at-SfN-Events

LECTURE San Diego Convention Center

092. Bidirectional Interactions Between the Brain and Implantable Computers — CME

Sun. 8:30 AM - 9:40 AM — SDCC Ballroom 20

Speaker: E. E. FETZ, Univ. of Washington.

Closed-loop interactions between the brain and implantable computers open new opportunities for brain research and clinical applications. This lecture will review the use of bidirectional brain-computer interfaces to bridge lost physiological connections, strengthen synaptic connections via Hebbian plasticity, and reinforce neural activity with intracranial stimulation. Closed-loop activity-dependent stimulation has numerous applications, depending on the recorded signals, the computed transforms, and the stimulated targets.

SYMPOSIUM San Diego Convention Center

093. Multiscale Computer Modeling of Neural Circuits in Health and Disease — CME

Sun. 8:30 AM - 11:00 AM — SDCC 6A

Chair: W. W. LYTTON, State University of New York, Downstate Medical Center

Co-Chair: C. BERNARD, INSERM

Brain function depends on interactions across multiple temporal and spatial scales from molecules and synapses up to interconnected brain areas. Mechanistic multiscale modeling provides the means to organize and understand the cross-scale interactions to explain how brains and other neural systems work or fail. Computational modeling also allows us to bridge the gap between mechanism and phenomenology, from anatomy and dynamics to behavior and cognition.

8:30 **093.01** Introduction.

8:35 **093.02** Modeling to explore individual variability and resilience to perturbation. E. MARDER. *Brandeis Univ.*

9:10 **093.03** Understanding epilepsy across spatial and time scales. C. BERNARD. *INSERM Inst. de Neurosci. des Systèmes.*

9:45 **093.04** Multiscale modeling of brain disease. W. W. LYTTON. *State Univ. of New York, Downstate Med. Ctr.*

10:20 **093.05** Mechanisms underlying global traveling waves in human cerebral cortex. T. J. SEJNOWSKI. *Salk Inst.*

10:55 **093.06** Closing Remarks.

SYMPOSIUM San Diego Convention Center

094. Specific Basal Forebrain-Cortical Cholinergic Circuits Coordinate Cognitive Operations — CME

Sun. 8:30 AM - 11:00 AM — SDCC 6B

Chair: L. ZABORSZKY, Rutgers, The State University of New Jersey

Co-Chair: G. R. POE, University of California, Los Angeles

The basal forebrain (BF) cholinergic projections, once viewed as a diffuse system, is emerging as highly specific in its connectivity based on molecular genetics as well as functional and quantitative anatomical studies. The BF can both rapidly and selectively modulate activity of specific circuits and coordinate ACh release in multiple areas related to particular aspects of cognitive processing. This symposium presents new approaches and findings from studies of the function and dysfunction of this system.

8:30 **094.01** Introduction.

8:35 **094.02** Functional organization of the basal forebrain cholinergic space in rodents and humans. L. ZABORSZKY. *Rutgers, The State Univ. of New Jersey.*

9:10 **094.03** Cholinergic shaping of neural dynamics and adaptive behavior. A. CHIBA. *Univ. of California.*

9:45 **094.04** Mapping the cholinergic engram of fear and anxiety. L. W. ROLE. *Stony Brook Univ.*

10:20 **094.05** Cholinergic neuromodulation and cortical function. M. E. HASSELMO. *Boston Univ.*

10:55 **094.06** Closing Remarks.

MINISYMPOSIUM San Diego Convention Center

095. Computational Affective Neuroscience: Algorithms for Survival — CME

Sun. 8:30 AM - 11:00 AM — SDCC 6C

Chair: R. B. RUTLEDGE, University College London

Co-Chair: D. R. BACH, University of Zurich

Emotions play a central role in adaptive behavior across the animal kingdom but are conceptualized in divergent and often imprecise ways. Researchers have recently adopted computational approaches to study a range of emotional phenomena from behavior to feelings, and to use computational models to interrogate the underlying neural circuits. This minisymposium will focus on how computational models can explain the role of emotions in adaptive behavior, both in humans and nonhuman animals.

8:30 **095.01** Introduction.

8:35 **095.02** A cognitive-computational model for action selection under threat. D. R. BACH. *Univ. of Zurich.*

8:55 **095.03** Interrogation of a brain-wide fear memory network in mice. G. VETERE. *Brain Plasticity Unit - ESPCI.*

9:15 **095.04** Statistics, structure, and representation in neural circuits for emotional memories. T. MADARASZ. *Univ. of Oxford.*

10:35	095.08 Closing Remarks.	9:15	097.04 Enterochromaffin-mediated chemosensation controls gut serotonin release and enteric nerve activation. J. BAYRER. <i>Univ. of California, San Francisco.</i>
MINISYMPOSIUM San Diego Convention Center		9:35	097.05 ● Neuron-glia interactions in the gastrointestinal tract. M. RAO. <i>Columbia Univ.</i>
096. The Dynamic Interaction of Vision and Eye Movements — CME		9:55	097.06 ENS-associated macrophages: "Microglia" of the gut. M. BOGUNOVIC. <i>Penn State Univ. Col. of Med. and Milton S. Hershey Med. Ctr.</i>
Sun. 8:30 AM - 11:00 AM — SDCC 6E		10:15	097.07 Age-dependent changes in macrophages drives inflammation-mediated degeneration of the enteric nervous system. L. BECKER. <i>Stanford Univ.</i>
Chair: J. P. MAYO, <i>Duke University</i>		10:35	097.08 Closing Remarks.
A resurgence in the study of eye movements and visual perception has been driven by new experimental approaches (data modeling, the use of clinical populations, and simultaneous recordings of neuronal populations) and comparisons between primate models of vision (humans, macaques, and marmosets). This minisymposium will use these innovations to reveal insight into the effects of exploratory (saccades) and tracking (smooth pursuit) eye movements on vision, cognition, and motor control.		MINISYMPOSIUM San Diego Convention Center	
8:30	096.01 Introduction.	9:35	098. Molecular Mechanisms Underpinning Dopamine Neuron Development, Diversity, and Vulnerability — CME
8:35	096.02 Smooth pursuit eye movements as a model of visual prediction. M. SPERING. <i>The Univ. of British Columbia.</i>	9:55	Sun. 8:30 AM - 11:00 AM — SDCC 29D
8:55	096.03 Smooth pursuit without foveal vision. N. SHANIDZE. <i>Smith-Kettlewell Eye Res. Inst.</i>	Chair: R. AWATRAMANI, <i>Northwestern University</i>	
9:15	096.04 The interaction of saccades and pursuit during tracking in marmosets. J. PATTADKAL. <i>The Univ. of Texas at Austin.</i>	Co-Chair: S. BLAESSE, <i>University of Bonn</i>	
9:35	096.05 Sensorimotor control of smooth pursuit. S. GLASAUER. <i>Ludwig-Maximilian-University.</i>	This minisymposium will cover topics including embryonic fate specification events, migration, and axon guidance that ultimately result in a multifunctional, heterogeneous, midbrain dopaminergic system.	
9:55	096.06 The relative contributions of area MT and the frontal eye fields to smooth pursuit. J. P. MAYO. <i>Duke Univ.</i>	8:30	098.01 Introduction.
10:15	096.07 Population codes for eye movements in the frontal eye fields. M. A. SMITH. <i>Univ. of Pittsburgh.</i>	8:35	098.02 Genetic approaches toward defining midbrain dopamine neuron diversity. R. AWATRAMANI. <i>Northwestern Univ.</i>
10:35	096.08 Closing Remarks.	8:55	098.03 Molecular mechanisms underlying the diversification and migration of midbrain dopaminergic neurons. S. BLAESSE. <i>Univ. of Bonn.</i>
MINISYMPOSIUM San Diego Convention Center		9:15	098.04 Dissecting dopamine neuron subset-specific axon guidance and cell migration mechanisms. J. PASTERKAMP. <i>Univ. Med. Ctr. Utrecht.</i>
097. ● Advances in Enteric Neurobiology: The "Brain" in the Gut in Health and Disease — CME		9:35	098.05 Establishment of dopaminergic neuronal connectivity during embryonic development. L. PANMAN. <i>MRC Toxicology Unit.</i>
Sun. 8:30 AM - 11:00 AM — SDCC 28A		9:55	098.06 Mechanisms of dopaminergic neural circuit formation. M. LEVESQUE. <i>Univ. of Laval.</i>
Chair: M. RAO, <i>Columbia University Medical Center</i>		10:15	098.07 CRISPR-Cas9 screens to highlight novel neuroprotective pathways in mouse and human midbrain dopamine neurons. E. METZAKOPIAN. <i>UK Dementia Res. Inst.</i>
Co-Chair: S. KULKARNI, <i>Johns Hopkins University</i>		10:35	098.08 Closing Remarks.
The enteric nervous system (ENS) is a large, complex division of the peripheral nervous system that regulates many digestive, immune, hormonal, and metabolic functions. This minisymposium will highlight the latest advances in enteric neurobiology and focus on new model systems for investigating ENS development, mechanisms of adult neurogenesis, enteric glial biology, and the impact of aging on the ENS, as well as the dynamic interactions among microbiota, immune cells, neurons, and glia in the gut.			

BASIC-TRANSLATIONAL-CLINICAL ROUNDTABLE

San Diego Convention Center

099. ● What We Know, What We Don't Know: How Can We Better Understand Alzheimer's Disease to Develop Effective Treatments? — CME

Sun. 8:30 AM - 11:00 AM — SDCC 10

Organizer: D. M. HOLTZMAN, *Washington University in St. Louis*

Speakers: R. VASSAR, G. D. RABINOVICI, P. S. AISEN

Alzheimer's disease (AD) is the most common cause of dementia. Genetics, environment, and lifestyle likely contribute to the development of AD. Recent genetic data suggest a key role for glia in influencing AD. AD pathology can now be detected by assessing biomarkers in living people, and many promising treatments are in development. This session will review an update of the main molecules that play a role in AD and discuss the current understanding of AD, new diagnostic methods, and treatments.

LECTURE San Diego Convention Center**100. Neural Data Science: Accelerating the Experiment-Analysis-Theory Cycle in Large-Scale Neuroscience — CME**

Sun. 10:00 AM - 11:10 AM — SDCC Ballroom 20

Speaker: L. PANINSKI, *Columbia Univ.*

Modern multineuronal recordings produce single-cell-resolution data on a large scale. "Neural data science" aims to extract meaning from the resulting huge new streams of data. This lecture will review recent progress and current challenges in this rapidly growing field, where new methods for network analysis, dimensionality reduction, and optimal control — developed in lockstep with advances in experimental neurotechnology — promise breakthroughs in multiple fundamental neuroscience problems.

LECTURE San Diego Convention Center**101. Sensorimotor Circuits for Social Communication — CME**

Sun. 11:30 AM - 12:40 PM — SDCC Ballroom 20

Speaker: M. MURTHY, *Princeton Univ.*

Social interactions require continually adjusting behavior in response to sensory feedback from a partner. This lecture will focus on the computations and neural mechanisms that underlie the processing of dynamic sensory information to flexibly guide social behaviors. In particular, this lecture will highlight recent discoveries using the acoustic communication system of *Drosophila* to characterize sensorimotor circuits for both song production and perception and will put these discoveries in the broader context of research on social communication across model systems.

NANOSYMPOSIUM**102. Axon and Dendrite Development: Axon Growth and Guidance: Adhesion, Cytoskeletal Dynamics, and Transport*****Theme A: Development***

Sun. 8:00 AM – San Diego Convention Center, SDCC 33

8:00 **102.01** Overexpression of tropomyosin Tpm3.1 enhances neurite outgrowth in an inhibitory environment for neurite growth. T. FATH*; H. STEFEN; A. HASSANADEH-BARFOROUSHI; T. TOMANIC; M. BRETTLE; S. FOK; N. TEDLA; T. BARBER; M. WAKIANI. *Macquarie Univ., UNSW Sydney, UNSW Sydney, Univ. of Technol. Sydney*.

8:15 **102.02** Evidence for Presenilin and Glycogen synthase kinase 3 beta (GSK3 β)-mediated regulation of molecular motors during axonal transport. R. BANERJEE*; Z. RUDLOFF; C. NAYLOR; M. YU; S. GUNAWARDENA. *Univ. At Buffalo, State Univ. of New York, Univ. at Buffalo, State Univ. at New York*.

8:30 **102.03** LRRK2 regulates growth cone signaling and axon guidance mediated by Wnt/Planar cell polarity pathway. K. ONISHI*; Y. ZOU. *Univ. of California San Diego*.

8:45 **102.04** TP5 enhances survival of the neurons insulted by overexpression of DAPK1. M. BHASKAR*; S. P. YADAV; N. D. AMIN; S. SKUNTZ; C. WINTERS; H. C. PANT. *NINDS/NIH, NIH*.

9:00 **102.05** Cannabinoid-induced axonal elongation and growth cone remodeling depend on kinesin1-mediated axonal transport of CB1 receptors. T. M. SAEZ; I. FERNANDEZ BESSONE; M. ALLOATTI; S. SARGIOTO; T. L. FALZONE*. *Univ. of Buenos Aires*.

9:15 **102.06** Constitutive interleukin-6 influences axon structure and transport in the optic projection. L. K. WAREHAM*; F. D. ECHEVARRIA; C. R. FORMICHELLA; R. M. SAPPINGTON. *Vanderbilt Univ. Med. Ctr., Case Western Reserve Univ., Vanderbilt Univ. Med. Ctr.*

9:30 **102.07** Dscam1 extended 3' UTR transcripts are essential for axon guidance. P. MIURA*; Z. ZHANG; R. PETERSON; K. SO; M. BAUER; H. NG; Y. ZHANG; J. H. KIM; T. KIDD. *Univ. of Nevada, Reno*.

NANOSYMPOSIUM**103. Animal Models of Neurodevelopmental Disease*****Theme A: Development***

Sun. 8:00 AM – San Diego Convention Center, SDCC 32

8:00 **103.01** Sex-specific behavioral and neuronal circuit disruptions in a 16p11.2 microdeletion model of autism. J. GIOVANNIELLO*; S. AHRENS; B. LI. *Cold Spring Harbor Lab.*

8:15 **103.02** Paternal aging affects trajectory of developmental patterns of ultrasonic vocalization syllables induced by maternal separation in C57BL6/J mice. L. MAI*; R. KIMURA; K. KANNO; H. INADA; N. OSUMI. *Tohoku University, Grad. Sch. of Med., Kagoshima Univ.*

8:30 **103.03** ● Zika virus infection produces extensive neurodegeneration in brain and spinal cord of developing mouse central nervous system. K. K. NOGUCHI*; S. L. WILLIAMS; J. N. HUFFMAN; B. S. SWINEY; P. SALINAS-CONTRERAS; H. S. WANG; K. DIKRANIAN. *Washington Univ. St. Louis, Washington Univ. in St Louis, Univ. of Missouri-St. Louis*.

Sunday PM

LECTURE San Diego Convention Center

- 175. CLINICAL NEUROSCIENCE LECTURE: From Axon Regeneration to Functional Recovery After CNS Injury — CME**

Sun. 1:00 PM - 2:10 PM — SDCC Ballroom 20

Speaker: Z. HE, Boston Children's Hosp.

In the adult mammalian CNS, the inability of injured axons to regenerate contributes to unrecoverable functional deficits. This lecture will present recently uncovered cellular and molecular mechanisms regulating the processes of neuronal injury responses and axon regeneration. Further discussion will focus on the progress in developing effective strategies to promote axon regeneration and functional recovery in experimental injury models *in vivo*, such as spinal cord injuries and optic nerve crush.

SYMPOSIUM San Diego Convention Center

- 176. Local Field Potentials and Deep Brain Stimulation — CME**

Sun. 1:30 PM - 4:00 PM — SDCC 6A

Chair: C. C. MCINTYRE, Case Western Reserve University

This symposium will provide an integrated story of scientifically driven clinical translation in deep brain stimulation (DBS) using local field potentials (LFPs). The talks will span from the basic science and fundamentals of LFP signals, to techniques and strategies for performing the clinical research necessary to define the appropriate LFP biomarkers, to direct application of adaptive DBS algorithms in clinical practice.

SYMPOSIUM San Diego Convention Center

- 177. Blood-Brain Barrier in Health and Disease: Role in Neurodegeneration, CNS Autoimmunity, and Gene Transfer — CME**

Sun. 1:30 PM - 4:00 PM — SDCC 6B

Chair: B. V. ZLOKOVIC, Keck School of Medicine of the University of Southern California

This symposium summarizes current advances on the role of the blood-brain barrier (BBB) in health and disease, including major human neurodegenerative disorders, such as Alzheimer's disease, and neuroimmune disease. It highlights single-cell approaches to understanding the role of brain vasculature in health and CNS disorders; cellular and molecular mechanisms at the BBB causing neurodegeneration and CNS autoimmunity; and gene transfer across the BBB to treat neurodegenerative and CNS disorders.

MINISYMPOSIUM San Diego Convention Center

- 178. High-Level Cognition in Low-Level Brain Regions — CME**

Sun. 1:30 PM - 4:00 PM — SDCC 6C

Chair: R. A. COWELL, University of Massachusetts

Mounting evidence now contests the idea that high-level brain regions such as the medial temporal lobe engage only in high-level functions like declarative memory. This challenges the broader assumption that the brain comprises discrete anatomical units specialized for distinct cognitive functions. This minisymposium extends that challenge by asking the question: Can high-level cognitive functions such as recognition memory, recall, and spatial cognition be mediated by low-level cortical regions?

Now more than ever, it is essential that scientists actively engage with the public. Through storytelling, or the use of a personal narrative, we can bring science to life and improve communication not only with the public but also within the community. In this minisymposium, presentations about the science of storytelling and why and how to tell stories, as well as three powerful personal stories, will demonstrate how storytelling can transform science communication and promote scientific progress.

Motor and premotor cortices are crucial for motor control. While classic primate studies have emphasized a role for motor cortices in movement generation, recent rodent studies implicate motor cortical neurons in sensory integration, behavioral strategizing, working memory, and decision making — underrated higher-order functions of the motor cortex that deserve better attention and study. This minisymposium will review recent findings, which highlight that the motor cortex is much more than just a "motor."		3:35	181.08 Closing Remarks.

LECTURE San Diego Convention Center**182. PETER AND PATRICIA GRUBER LECTURE: Decision, Reward, and the Basal Ganglia**

Sun. 2:30 PM - 3:40 PM — SDCC Ballroom 20

Speakers: A.M. GRAYBIEL, MIT; O. HIKOSAKA, Natl. Eye Institute, NIH; W. Schultz, Univ. of Cambridge*Support contributed by:* The Gruber Foundation*The Striatum and Decision-Making Based on Value*

Ann M. Graybiel, PhD

McGovern Institute for Brain Research at the Massachusetts Institute of Technology

The striatum was once thought to be a primitive part of the forebrain, despite evidence that basal ganglia dysfunction underlies major extrapyramidal disorders. Our work has contributed to the surprising realizations that the striatum actually has a sophisticated compartmental structure, that striatal circuits are implicated in decision-making and in neuropsychiatric as well as motor disorders, and that special modules in the striatum, called striosomes, are focal points in circuits linking mood-related neocortex with midbrain dopamine-containing neurons and other neuromodulatory regions. The striatum thus modulates a broad range of circuits affecting our behavioral state in health and disease.

*Parallel Basal Ganglia Circuits for Cooperative and Competitive Decision-Making*Okihide Hikosaka, MD, PhD
National Eye Institute, NIH

The basal ganglia control active behavior by disinhibiting a goal-directed action while inhibiting irrelevant actions. This is based on short-term and long-term memories, which are selectively processed in parallel circuits in the basal ganglia including dopamine neurons. These parallel circuits, together or separately, are essential for engendering motivation, attention, and skill.

*About Reward*Wolfram Schultz, MD
University of Cambridge

The talk will describe the properties of neurons in the brain's reward systems and how their action contributes to economic decision-making. Each of several reward systems, including those involving the dopamine neurons, striatum, amygdala, and orbitofrontal cortex, plays a unique role in this process. The details of this function are currently being investigated using designs based on behavioral theories, such as animal learning theory, machine learning, and economic utility theory.

LECTURE San Diego Convention Center**183. PRESIDENTIAL SPECIAL LECTURE: Neurobiology of Social Behavior Circuits**

Sun. 5:15 PM - 6:30 PM — SDCC Ballroom 20

Speaker: C. DULAC, Harvard University, Howard Hughes Med. Inst.*Support contributed by:* Tianqiao & Chrissy Chen Institute

Social interactions are essential for animals to reproduce, defend their territory, and raise their young. This lecture will describe new data aimed at deciphering the identity and functioning principles of neural circuits underlying various social behaviors, with an emphasis on a particularly important form of social interaction: parental care. This lecture will discuss how these findings open new avenues to deconstruct the neural bases of maternal and paternal behaviors and may help to further understanding of variations in the neural control of parenting in different animal species.
