Code of Conduct at SfN Events

SfN is committed to supporting discovery and scientific dialogue, and to fostering a welcoming community in which all scientists are able to contribute fully. The Society asserts that sexual harassment and other harassing behaviors have no place in a healthy scientific enterprise. We expect all attendees, media, speakers, volunteers, organizers, venue staff, guests, and exhibitors at SfN-organized events to help us ensure a safe and positive

environment. At the convention center, onsite medical and security personnel are available directly or through the SfN headquarters office.

If attendees experience unwelcome or unsafe situations anywhere in the city, attendees should swiftly contact local authorities (dial 9-1-1), and additional local social services resources are listed in one convenient location at the federal website www.changingourcampus.org. Any official

report of sexual harassment should be brought to the designated Human Resources Officer in the SfN headquarters office at each meeting convention center, or sent via email to hrofficer@sfn.org. The HR Officer will facilitate the completion of a report by a complainant.

For more information on SfN's policy, please go to: sfn.org/Membership/Professional-Conduct/Code-of-Conduct-at-SfN-Events

LECTURE San Diego Convention Center

433. Understanding Regeneration of Complex Body Parts — CME

Tue. 8:30 AM - 9:40 AM — SDCC Ballroom 20

Speaker: E. M. TANAKA, *Res. Inst. of Mol. Pathology.*

Regeneration of the nervous system and complex body structures, while minimal in humans, is observed in many animals, including vertebrates. How does injury trigger replacement of the missing portion of an organ? Recent advances in imaging and gene editing technologies have allowed us to identify molecular programs that control regeneration and the cells that execute these programs. This lecture will describe how the time-, space- and tissue-dependent responses to organ injury choreograph a molecular program that induces the regeneration of missing body structures.

SYMPORIUM San Diego Convention Center

434. RNA Control of Axonal Functions — CME

Tue. 8:30 AM - 11:00 AM — SDCC 6A

Chair: J. L. TWISS, *University of South Carolina*
Co-Chair: M. FAINZILBER, *Weizmann Institute of Science*

This symposium will highlight new insight on RNA control of axonal functions. Discoveries in different models and paradigms are coming together to provide a comprehensive view of how RNA localization and local translation regulate axon growth, maintenance, and regeneration. Intracellular trafficking, localized regulation, and axon-to-soma communication are key aspects of these mechanisms. The presentations will showcase diverse examples of how these fundamental mechanisms are implemented.

8:30 **434.01** Introduction.

8:35 **434.02** Signaling mechanisms for regulation of protein synthesis in axons. J. L. TWISS. *Univ. of South Carolina.*

9:10 **434.03** Distinct pathways involving piRNA and RNA granules in axon regeneration. Y. JIN. *UCSD.*

9:45 **434.04** Subcellular regulation of RNA localization and local translation in axon growth control. M. FAINZILBER. *Weizmann Inst. of Sci.*

10:20 **434.05** Orchestrating axonal transport, translation, and survival. R. A. SEGAL. *Dana-Farber Cancer Inst.*

10:55 **434.06** Closing Remarks.

SYMPORIUM San Diego Convention Center

435. The Feeling Within: Molecules to Behavior Underlying Interoception — CME

Tue. 8:30 AM - 11:00 AM — SDCC 6B

Chair: L. STOWERS, *The Scripps Research Institute*
Co-Chair: A. PATAPOUTIAN, *Howard Hughes Medical Institute and The Scripps Research Institute*

How does the brain monitor and react to our constantly changing internal physiology? While there has been rapid progress in understanding exteroception, less is known about how organisms sense and process information from within, such as hunger, respiration, circulation, excretion, and gut-brain interactions. This symposium will take a multidisciplinary approach to describe recent advances in interoception, from defining the signals that monitor internal states to identifying critical neuronal circuits that drive behavior.

8:30 **435.01** Introduction.

8:35 **435.02** Regulation of the gut-brain by the microbiome. S. MAZMANIAN. *Caltech.*

9:10 **435.03** Role of Piezo ion channels in interoception. A. PATAPOUTIAN. *Howard Hughes Med. Inst. and The Scripps Res. Inst.*

9:45 **435.04** Neural circuits for homeostatic behaviors. Z. KNIGHT. *UCSF.*

10:20 **435.05** Sensory and motor control of voluntary urination. L. STOWERS. *The Scripps Res. Inst.*

10:55 **435.06** Closing Remarks.

MINISYMPORIUM San Diego Convention Center

436. The Neurobiology of Forgetting — CME

Tue. 8:30 AM - 11:00 AM — SDCC 6C

Chair: M. WIMBER, *University of Birmingham*
Co-Chair: P. W. FRANKLAND, *Hospital for Sick Children*

We automatically encode virtually all experiences, yet the vast majority of our experiences are not remembered later. This minisymposium will address the questions of how and why the brain forgets. It brings together researchers that study forgetting in flies, rodents, and humans. The minisymposium will focus on molecular-, cellular-, and systems-level mechanisms underlying forgetting and consider the active and adaptive roles that forgetting plays in keeping our memory system flexible.

8:30 **436.01** Introduction.

8:35 **436.02** Dopamine-mediated active forgetting in *Drosophila*. R. L. DAVIS. *The Scripps Res. Inst.*

8:55 **436.03** Molecular and neural network mechanisms underlying active forgetting. Y. ZHONG. *Tsinghua Univ.*

9:15 **436.04** Hippocampal neurogenesis and adaptive forgetting. P. W. FRANKLAND. *Hosp. For Sick Children.*

* Indicated a real or perceived conflict of interest, see page 148 for details.

Tues. AM

- 9:35 **436.05** Tracking adaptive forgetting in human brain activity. M. WIMBER. *Univ. of Birmingham.*
- 9:55 **436.06** Enhancement and forgetting of semantic memories across offline periods. A. C. SCHAPIRO. *Beth Israel Deaconess Med. Ctr. / Harvard Med.*
- 10:15 **436.07** The representation theory of forgetting: Both decay and interference matter. T. SADEH. *Ben-Gurion Univ. of the Negev.*
- 10:35 **436.08** Closing Remarks.

MINISYMPOSIUM San Diego Convention Center

437. Mechanisms of Tau Oligomer-Induced Synaptic Impairment and Potential Treatment Strategies — CME

Tue. 8:30 AM - 11:00 AM — SDCC 6E

Chair: O. ARANCIO, *Columbia Univ*
Co-Chair: F. M. LONGO, *Stanford University Medical Center*

Soluble oligomeric forms of the Alzheimer's disease protein tau are gaining a lot of attention because they likely promote cell-to-cell propagation of pathology and are more toxic than large insoluble aggregates. This minisymposium will discuss evidence supporting a role for tau oligomers in disease initiation and progression and explore therapeutic strategies for inhibiting formation of tau oligomers and/or counteracting synaptic impairment and degeneration caused by tau oligomers.

- 8:30 **437.01** Introduction.
- 8:35 **437.02** Formation and spreading of tau oligomeric strains. R. KAYED. *Univ. of Texas Med. Br.*
- 8:55 **437.03** APP as a common mechanism for extracellular oligomeric tau-induced synaptic dysfunction and memory loss. O. ARANCIO. *Columbia Univ.*
- 9:15 **437.04** Role of astrocytes in oligomeric tau-induced synaptic dysfunction and tau pathology propagation. C. GRASSI. *Inst. of Human Physiology, Univ. Cattolica.*
- 9:35 **437.05** Tau-mediated dysfunction is mediated by small soluble phosphorylated tau species including tau oligomers. A. MUDHER. *Univ. of Southampton.*
- 9:55 **437.06** Novel therapeutic targets against tau oligomers-induced pathology: A phenotypic approach. S. PARMENTIER-BATTEUR. *Merck & Co, Inc.*
- 10:15 **437.07** Small molecule targeting of the p75 receptor inhibits tau oligomer formation and tau oligomer-induced synaptic impairment. F. M. LONGO. *Stanford Univ.*
- 10:35 **437.08** Closing Remarks.

MINISYMPOSIUM San Diego Convention Center

438. Neuromodulation of Brain States in Health and Disease: Bridging Experiments and Computational Models — CME

Tue. 8:30 AM - 11:00 AM — SDCC 28A

Chair: S. RAMASWAMY, *École Polytechnique Fédérale de Lausanne*
Co-Chair: A. ADAMANTIDIS, *University of Bern*

Subcortical neuromodulatory systems dynamically reconfigure the activity of neural microcircuits and regulate shifts between brain states in health and disease. Despite their crucial role in physiology and pathology, the cellular and synaptic mechanisms by which neuromodulators control neural activity remain unclear. This minisymposium will highlight cutting-edge techniques developed in global brain initiatives for a quantitative assessment of neuromodulation in brain function and dysfunction.

- 8:30 **438.01** Introduction.
- 8:35 **438.02** Thalamic dual-modulation of sleep and wakefulness. A. ADAMANTIDIS. *Univ. of Bern.*
- 8:55 **438.03** Studying the dynamic control of cortical circuits by subcortical systems at the circuit level in non-human primates: We can and we should. A. A. DISNEY. *Duke Univ.*
- 9:15 **438.04** Reconciling long-lived modulatory switches in activity with homeostatic plasticity. T. O'LEARY. *Univ. of Cambridge.*
- 9:35 **438.05** Predictive in silico reconstruction of cholinergic control of neocortical network states. S. RAMASWAMY. *École Polytechnique Fédérale de Lausanne.*
- 9:55 **438.06** To seek or to flee: Serotonergic regulation of approach, avoidance, and escape behavior. M. R. WARDEN. *Cornell Univ.*
- 10:15 **438.07** Reward-associated modulation of excitatory-inhibitory dynamics in the prefrontal cortex. O. YIZHAR. *Weizmann Inst.*
- 10:35 **438.08** Closing Remarks.

MINISYMPOSIUM San Diego Convention Center

439. Whole-Brain Analysis of Cells and Circuits by Tissue Clearing and Light-Sheet Microscopy — CME

Tue. 8:30 AM - 11:00 AM — SDCC 29D

Chair: H. R. UEDA, *The University of Tokyo*
Co-Chair: K. CHUNG, *Massachusetts Institute of Technology*

Recent advances in tissue clearing, biomolecular labeling, rapid imaging, and image informatics have allowed neuroscientists to observe the entire brain at a subcellular resolution. Whole brain clearing and imaging is particularly powerful for physiology and pathology of cellular components and their connections in the CNS. This minisymposium will discuss challenges and opportunities in whole-brain analysis of cells and circuits to elucidate brain functions by tissue clearing and light-sheet microscopy.

- 8:30 **439.01** Introduction.
- 8:35 **439.02** Whole-body and whole-organ clearing and imaging with sub-cellular resolution towards organism-level systems biology. H. R. UEDA. *The Univ. of Tokyo.*
- 8:55 **439.03** Cruising inside cell. A. MIYAWAKI. *RIKEN.*

• Indicated a real or perceived conflict of interest, see page 148 for details.

▲ Indicates a high school or undergraduate student presenter.

* Indicates abstract's submitting author

- 9:15 **439.04** Imaging of cleared biological samples with the ultramicroscope. H. DODT. *Vienna Univ. of Technol.*
- 9:35 **439.05** Panoptic vDISCO imaging of intact transparent mice for unbiased biomedical research. A. ERTURK. *Klinikum der Univ. München.*
- 9:55 **439.06** Functional and anatomical imaging of intact circuits using modern neuroscience techniques. J. B. TREWEEK. *CALTECH.*
- 10:15 **439.07** Multi-scale high-dimensional imaging and phenotyping of complex biological system. K. CHUNG. *MIT.*
- 10:35 **439.08** Closing Remarks.

BASIC-TRANSLATIONAL-CLINICAL ROUNDTABLE*San Diego Convention Center*

- 440. Neuroprosthetic Devices: A Patient's Perspective on Brain Computer Interfaces — CME**

Tue. 8:30 AM - 11:00 AM — SDCC 10

*Organizer: F. SOLZBACHER, Univ. of Utah**Speakers: I. BURKHART, K. WALGAMOTT, N. COPELAND, N. SMITH*

Patients will talk about their physical limitations and why they participated in time-intensive research for scientific knowledge. They will cover the challenges, breakthroughs, and difficult decisions that come with wearing a neuroprosthetic device. They will also speak to the benefits, despite trial and error methodologies and invasive surgeries, of participating in brain-computer interface (BCI) research, how it has changed their lives, and where they believe researchers should push the future of BCI technologies.

LECTURE *San Diego Convention Center*

- 441. The Genetics, Neurobiology, and Evolution of Natural Behavior — CME**

Tue. 10:00 AM - 11:10 AM — SDCC Ballroom 20

Speaker: H. E. HOEKSTRA, Harvard University/HHMI.

New tools — from genomic analyses to automated behavioral assays — have enabled the discovery of specific genes that contribute to variation in behavior. This lecture will focus on the genetic and neurobiological mechanisms responsible for the evolution of natural behavior. It will highlight recent discoveries from diverse organisms that demonstrate how genetic changes, through neural circuits, give rise to variation in behavior, and how these findings in nonmodel species in turn shed light onto variation in human behavior.

LECTURE *San Diego Convention Center*

- 442. Neuronal Diversity Within the Ventral Tegmental Area and Co-Release of Neurotransmitters — CME**

Tue. 11:30 AM - 12:40 PM — SDCC Ballroom 20

Speaker: M. MORALES, Natl. Inst. on Drug Abuse, NIH.

The release of several neurotransmitters from a single neuron has been recognized for decades. Emerging evidence has shown that the adult brain has subpopulations of neurons with the capability to accumulate vesicular glutamate and GABA for their synaptic release. This lecture will focus on the key findings and proposed molecular and cellular models for the co-release of glutamate and GABA and discuss its implications for human health.

Tuesday PM

LECTURE San Diego Convention Center

528. Genetic Specification of Neuronal Identity — CME

Tue. 1:00 PM - 2:10 PM — SDCC Ballroom 20

Speaker: O. HOBERT, *Columbia Univ.*

How is the enormous diversity of cell types in a nervous system genetically specified? The answer to this question lies in defining the gene regulatory mechanisms that control the expression of neuron type-specific gene batteries. In this lecture, studies on the genetic specification of many different neuronal cell types in the nematode *C. elegans* that have led to the discovery of some commonly used strategies, by which diverse neuronal identities are instructed, will be discussed.

SYMPOSIUM San Diego Convention Center

529. Organelle Dynamics and Proteostasis in Neuronal Homeostasis and Degeneration — CME

Tue. 1:30 PM - 4:00 PM — SDCC 6A

Chair: X. WANG, *Stanford University*

Neuronal organelles are highly dynamic, and their biogenesis is tightly regulated in the extended extremities of a neuron. How to maintain organelle homeostasis is a fundamental cellular concern and crucial to neuronal survival. Defects in organelle function have emerged as key contributors to several neurodegenerative disorders, including Alzheimer's and Parkinson's disease. This symposium will present cutting-edge research at the intersection of neuronal cell biology and neurodegeneration.

530. The Dynamic Brain: Signatures of Fast Functional Reconfiguration, Their Interpretability, and Clinical Value — CME

Tue. 1:30 PM - 4:00 PM — SDCC 6B

Chair: J. GONZALEZ-CASTILLO, *National Institute of Mental Health, NIH*

Co-Chair: P. BANDETTINI, *National Institute of Mental Health, NIH*

Communication across brain regions fluctuates tirelessly as we interact with our environment. Established patterns of functional connectivity (e.g., DMN) often disintegrate in the span of a few minutes, making the concept of networks elusive under such volatile conditions. This symposium will review how to best capture, model, and interpret dynamic patterns of functional connectivity in the human brain. It will then discuss in what ways aberrant dynamic connectivity underlies clinical conditions.

SYMPOSIUM San Diego Convention Center

531. Language Networks Derived From Direct Intracranial Recordings in Humans — CME

Tue. 1:30 PM - 4:00 PM — SDCC 6C

Chair: N. TANDON, *University of Texas Health Science Center at Houston*

Co-Chair: S. DEHAENE, *INSERM-CEA-University Paris Saclay, National Institute for Health and Medical Research*

Intracranial recordings in humans provide data unsurpassed in spatiotemporal resolution that yield novel insight into the rapid computations that underlie language. This symposium details results from a broad array of questions asked and experimental paradigms used across five labs to probe language architecture — from reading and sentence comprehension to lexical retrieval and articulation processes. This new knowledge about language networks carries implications for learning and disease.

532. Neuropeptide Signaling: From Physiology to Behavior — CME

Tue. 1:30 PM - 4:00 PM — SDCC 6E

Chair: J. GARRISON, *Buck Institute for Research on Aging*

Neuropeptides comprise the largest and most diverse class of neuromodulators, and they mediate integral processes ranging from energy homeostasis to behavior. This minisymposium will highlight recent experimental and technical advances in understanding mechanisms by which neuropeptide signaling can influence physiology and behavior at both the cellular and circuit level in a range of organisms.

533. Molecular and Nano-Organization of Synapses — CME

Tue. 1:30 PM - 4:00 PM — SDCC 28A

Chair: T. BIEDERER, *Tufts University School of Medicine*

Recent progress has revealed that the nerve terminal, synaptic cleft, and postsynaptic site form a trans-cellular unit that is precisely aligned on a nanoscale to transmit information. This minisymposium will investigate the machinery of each compartment and how compartments are integrated by synaptic adhesion molecules and by glial- and neuron-secreted factors. Going beyond a static picture, the minisymposium will also address dynamic properties of synaptic compartments that contribute to remodeling.

534. Sex Differences and Hormone Action in the Limbic System — CME

Tue. 1:30 PM - 4:00 PM — SDCC 29D

Chair: J. MEITZEN, *North Carolina State University*

Limbic system function is critical for the control of emotion, motivation, and memory. Sex differences and hormone effects have been demonstrated in the limbic system, including in the nucleus accumbens, amygdala, and hippocampus. This minisymposium will highlight recent work on the electrophysiological and molecular mechanisms underlying these differences, how they interact with environmental stimuli such as stress, and their relevance to mental illness and other disorders.

LECTURE San Diego Convention Center**535. HISTORY OF NEUROSCIENCE LECTURE: Deciphering Neural Circuits: From the Neuron Doctrine to the Connectome**

Tue. 2:30 PM - 3:40 PM — SDCC Ballroom 20

Speaker: M. BENTIVOGLIO, Univ. of Verona.

Neurons need to communicate, and they do so in neural circuits on which brain function is built. Our evolving understanding of neuronal connectivity of unfathomable complexity is key to progress in neuroscience. The enunciation in 1891 of the Neuron Doctrine led to the explosion of neuroscience in the 20th century; since the beginning of the 21st century, connectomics has introduced novel concepts, igniting hopes to crack the code of the human brain. Traversing the itinerary of paradigm shifts in the understanding of neural circuits, this lecture will highlight current challenges and foci of research.

LECTURE San Diego Convention Center**536. PRESIDENTIAL SPECIAL LECTURE: From Salvia Divinorum to LSD: Toward a Molecular Understanding of Psychoactive Drug Actions**

Tue. 5:15 PM - 6:30 PM — SDCC Ballroom 20

Speaker: B. L. ROTH, Univ. of North Carolina at Chapel Hill.

How do psychoactive drugs as diverse as the potent hallucinogen LSD and the atypical antipsychotic drug clozapine exert their actions at the molecular level? This lecture will first show how research has illuminated the molecular targets responsible for the actions of psychoactive drugs. It will then illustrate how structural insight into psychoactive drug actions can be leveraged to create potentially safer and more effective medications for many neuropsychiatric disorders.
