A Development

B Neural Excitability, Synapses, and Glia: Cellular Mechanisms

C Disorders of the Nervous System

D Sensory and Motor Systems

E Integrative Systems: Neuroendocrinology, Neuroimmunology and Homeostatic Challenge

F Cognition and Behavior

G Novel Methods and Technology Development

H History, Teaching, Public Awareness, and Societal Impacts in Neuroscience

Note: Theme H Posters will be located in Hall A beginning at 1 p.m. on Saturday, Oct. 17, and will remain posted until 5 p.m., Sunday, Oct. 18.

Cover artwork by: Elizabeth Jameson. Face-Off, MRI of the Artist's Brain, is based on an MRI of Elizabeth Jameson's brain. It is a part of a series of etchings that are portraits that express the mystery of the brain revealed through MRI images and angiograms. Digital brain scans became a part of the artist's life when she was diagnosed with Multiple Sclerosis. As her stack of MRIs grew, so did her fascination with the brain as well as the eerie MRIs. They were frightening, yet mesmerizing. The resulting art came from her desire to reinterpret these images, using them to explore the wonder and the complexity of the brain.

Monday AM

SPECIAL LECTURE McCormick Place

- 269.** **Global Positioning System Mechanisms of Migrating Monarch Butterflies** — CME

Mon. 8:30 AM - 9:40 AM — Hall B1

Speaker: S. M. REPPERT, *Univ. of Massachusetts Med. Sch.*

This lecture will focus on the navigational mechanisms exhibited by eastern North American monarch butterflies during their iconic fall migration. This includes use of a time-compensated sun compass and of a light-dependent inclination magnetic compass. Genomic and genetic strategies have been developed to define the genetic underpinning of the migration. The monarch butterfly has emerged as a model system to study the neural, molecular, and genetic basis of long-distance animal migration.

SYMPORIUM McCormick Place

- 270.** **Early Reports from the BRAIN Initiative Frontline: Advancing Technologies to Accelerate Our Understanding of Brain Function** — CME

Mon. 8:30 AM - 11:00 AM — S100A

Chair: E. E. MARDER

Co-Chair: J. I. ROSKAMS

The BRAIN Initiative was launched in 2013 to stimulate research in key areas of technology development, analysis, and big data research that will accelerate our understanding of brain function. The first funded BRAIN Initiative projects are creating new avenues to understand brain cell diversity, *in vivo* function and connectivity. Based across a variety of organisms, this symposium will present some of the preliminary news from the first round of BRAIN-funded projects.

8:30 **270.01** Introduction.

8:35 **270.02** Nonlinear optical imaging of mouse brain structure and function. C. XU. *Cornell Univ.*

9:10 **270.03** Noninvasive functional brain imaging at the molecular level. A. JASANOFF. *MIT.*

9:45 **270.04** High density recording and stimulating electrodes. T. J. GARDNER. *MIT.*

10:20 **270.05** Establishing a comprehensive and standardized cell type characterization platform. H. ZENG. *Allen Inst. for Brain Sci.*

10:55 **270.06** Closing Remarks.

SYMPORIUM McCormick Place

- 271.** **Retinal Microcircuits for the Computation of Motion Direction: Functional Organization, Development, and Behavior** — CME

Mon. 8:30 AM - 11:00 AM — S100B

Chair: H. SEUNG

The retina has historically been a region of the mammalian central nervous system that is especially tractable. Two-photon imaging, serial electron microscopy, and genetic manipulations of specific cell types are revealing with unprecedented precision how the microcircuitry is functionally organized, emerges during development, and contributes to visually-guided behaviors. This symposium will survey recent progress using the example of retinal direction selectivity.

8:30 **271.01** Introduction.

8:35 **271.02** Bipolar cell contributions to retinal motion detection: Spatio-temporal organization. T. EULER. *Univ. of Tübingen.*

9:10 **271.03** Space-time wiring specificity supports direction selectivity in the retina. H. SEUNG. *Princeton Univ.*

9:45 **271.04** Development of retinal microcircuits for direction selectivity. M. B. FELLER. *Univ. of California, Berkeley.*

10:20 **271.05** Parallel motion pathways from retina to brain. A. HUBERMAN. *Univ. of California, San Diego*

10:55 **271.06** Closing Remarks.

MINISYMPORIUM McCormick Place

- 272.** **Chaperones in Neurodegeneration** — CME

Mon. 8:30 AM - 11:00 AM — S406A

Chair: I. LINDBERG

This minisymposium will present new work in the area of neuronal proteostasis with a specific focus on the involvement of cellular chaperones in neurodegenerative disease. There will be a brief discussion of protein misfolding in neurodegenerative disease. Then each speaker will present work on a different aspect of chaperone control of neuronal proteostasis with topics including chaperone engineering, blockade of protein oligomerization and cytotoxicity, as well as the rescue of neurodegenerative processes.

8:30 **272.01** Introduction.

8:35 **272.02** Protein disaggregases to counter neurodegeneration. J. SHORTER. *Univ. of Pennsylvania.*

8:55 **272.03** Regulating extracellular proteostasis through the unfolded protein response. R. L. WISEMAN. *The Scripps Res. Inst.*

9:15 **272.04** Chaperones are able to bind to and suppress toxicity of pre-formed protein oligomers. F. CHITI. *Univ. of Florence.*

* Indicates abstract's submitting author

- 9:35 **272.05** The neuronal secretory chaperones 7B2 and proSAAS suppress the aggregation of neurodegenerative disease-related proteins. I. LINDBERG. *Univ. of Maryland-Baltimore.*
- 9:55 **272.06** Controlling tau aggregation and toxicity with Hsp90 chaperone complexes. C. A. DICKEY. *Univ. South Florida.*
- 10:15 **272.07** Hsp90 inhibitors as potential therapeutics for Parkinson's disease and related synucleinopathies. P. J. MCLEAN. *Mayo Clin. Jacksonville.*
- 10:35 **272.08** Closing Remarks.

MINISYMPOSIUM McCormick Place

- 273. New Insights into Signal Generation at the Presynaptic Active Zone — CME**

Mon. 8:30 AM - 11:00 AM — S105

Chair: A. SCIMEMI

Co-Chair: J. S. DITTMAN

The presynaptic active zone is the site of Ca^{2+} channels localization, synaptic vesicle docking, and neurotransmitter release. Recent findings shed new light on the topography of the presynaptic active zone and on the molecular mechanisms underlying its function and plasticity in response to neural activity and pathology. This minisymposium will provide a panel of discussion of recent advances in the molecular organization of the presynaptic active zone at central and peripheral synapses.

- 8:30 **273.01** Introduction.

- 8:35 **273.02** Influence of nanoscale channel -vesicle topography on fast synaptic transmission. D. A. DIGREGORIO. *Inst. Pasteur.*

- 8:55 **273.03** Tuning of voltage-gated calcium channel recruitment to the presynaptic release sites. A. FEJTOVA. *Leibniz Inst. for Neurobio.*

- 9:15 **273.04** Otoferlin, a C2-domain protein with multiple functions at the hair cell active zone. J. NEEF. *Univ. Med. Ctr. Goettingen.*

- 9:35 **273.05** Synaptic vesicles position complexin to inhibit spontaneous fusion. R. T. WRAGG. *Weill Cornell Med. Col.*

- 9:55 **273.06** Homeostatic tuning of presynaptic protein degradation and neurotransmitter release. M. MUELLER. *Univ. of Zurich.*

- 10:15 **273.07** Synaptic and extrasynaptic functions of a molecular co-chaperone. R. FERNANDEZ-CHACON. *Univ. of Seville.*

- 10:35 **273.08** Closing Remarks.

MINISYMPOSIUM McCormick Place

- 274. Can We Merge the Divergent Views of Hippocampal Function? — CME**

Mon. 8:30 AM - 11:00 AM — S103

Chair: D. SCHILLER

Co-Chair: H. B. EICHENBAUM

Two views diverge in hippocampal research. Some argue that the hippocampus calculates paths through space, whereas others claim that the hippocampus mediates declarative memory. These views emerged largely through independent fields of research. How can researchers reconcile the spatial and memory views of hippocampal function? The goal of this minisymposium is to discuss novel findings that might provide a bridging framework, paving the way for a unified understanding of hippocampal function.

- 8:30 **274.01** Introduction.

- 8:35 **274.02** Hippocampal ensembles reflect memory for spatial experience. D. FOSTER. *Johns Hopkins Univ. Sch. of Med.*

- 8:55 **274.03** Spatial and memory circuits in hippocampus and medial entorhinal cortex. S. LEUTGEB. *Univ. of California.*

- 9:15 **274.04** Using virtual reality to investigate spatial memory in the nonhuman primate. E. BUFFALO. *Washington Natl. Primate Res. Ctr.*

- 9:35 **274.05** The human hippocampus: A special place for time and space. C. RANGANATH. *UC Davis.*

- 9:55 **274.06** The role of hippocampus in temporal memory. L. DAVACHI. *NYU.*

- 10:15 **274.07** A map for social navigation in the human brain. D. SCHILLER. *Icahn Sch. of Med. at Mount Sinai.*

- 10:35 **274.08** Closing Remarks.

MINISYMPOSIUM McCormick Place

- 275. Internally and Memory-Guided Behaviors: The Role of Frontal Cortical Ensembles — CME**

Mon. 8:30 AM - 11:00 AM — S406B

Chair: N. NARAYANAN

Co-Chair: A. C. KWAN

Organized behavior is influenced by internal representations of the external world. How mental models constructed from memory, rules, and timing influence cortical dynamics remains unclear. In this minisymposium, presenters will highlight recent studies of the frontal cortex that have leveraged large-scale recording methods and novel tasks for rodents. These studies are revealing critical roles for cortical oscillations and ensemble activity in mediating internally guided behaviors that could have relevance in understanding brain disease.

- 8:30 **275.01** Introduction.

- 8:35 **275.02** Dynamical function of medial prefrontal cortex in working memory. C. LI. *Shanghai Inst. of Neurosci.*

- 8:55 **275.03** Representation of internal models by rodent mPFC neuronal ensembles. A. Y. KARPOVA. *Janelia Farms.*

- 9:15 **275.04** Distinct roles of visual, parietal, and frontal motor cortices in a memory-guided sensorimotor decision. M. GOARD. *MIT.*

- 9:35 **275.05** Prefrontal 4 Hz oscillations guide the temporal control of action. K. PARKER. *Univ. of Iowa.*

- 9:55 **275.06** Selectivity versus flexibility in frontal cortex representations. J. SEAMANS. *Univ. of British Columbia.*
- 10:15 **275.07** Frontal cortical dynamics during adaptive choice behavior. A. KWAN. *Yale Univ. Med. Sch.*
- 10:35 **275.08** Closing Remarks.

SPECIAL LECTURE McCormick Place

276. Development and Reprogramming of Neuronal Diversity in the Central Nervous System — CME

Mon. 11:30 AM - 12:40 PM — Hall B1

Speaker: P. ARLOTTA, *Harvard Univ.*

Support contributed by: Lilly USA, LLC

The mammalian central nervous system (CNS) contains an unparalleled diversity of neuronal subtypes, which are largely generated during embryonic development and maintained unchanged in the adult. This lecture will cover progress made in understanding the regulatory, molecular logic that shapes neuronal diversity in the embryo, consider its importance for CNS assembly and function, and discuss recent evidence for the unexpected capacity of central neurons to post-mitotically “reprogram” their class-specific features.

DAVID KOPF LECTURE ON NEUROETHICS McCormick Place

277. Giving Voice to Consciousness: Neuroethics, Human Rights, and the Indispensability of Neuroscience

Mon. 10:00 AM - 11:10 AM — Hall B1

Speaker: J. J. FINS. *Weill Med. College, Cornell Univ.*

Support contributed by: David Kopf Instruments

The ability of neuroprosthetics to restore functional communication in patients with disorders of consciousness has the potential to reintegrate patients into the nexus of family and community. As a worthy scientific pursuit, Fins will argue that this effort is a moral imperative which links respect for persons with the reemergence of voice out of covert consciousness. As such, it is a human rights issue for a population too long marginalized. For rights to come to mind, patients will need greater access to medical care and research and the skilled engagement of the neuroscience community.

SYMPORIUM McCormick Place

360. Understanding Neural Circuits through Dendrite Development and Function — CME

Mon. 1:30 PM - 4:00 PM — S100A

Chair: K. SHEN

Co-Chair: J. R. SANES

The complex and diverse dendritic arbors have long been recognized as a critical feature of distinct neuronal cell types. The molecular knowledge on dendrite development and cell biology is critical for our understanding of neural circuit assembly and function. In this symposium, speakers will feature several major experimental systems for dendrite research and discuss key results on development, unique cell biology, and how dendrites shape intact neural circuits.

1:30 **360.01** Introduction.

1:35 **360.02** Control of dendrite morphogenesis: From form to function. Y. JAN. *Univ. California*.

2:10 **360.03** Morphogenesis of retinal dendrites: Function follows form. J. R. SANES. *Harvard Univ.*

361. Rethinking Dogma in Thalamocortical Epilepsies — CME

Mon. 1:30 PM - 4:00 PM — S100B

Chair: J. R. HUGUENARD

Co-Chair: H. SHIN

Generalized absence epilepsy has a unique EEG expression and behavioral correlate characterized by 3 Hz spike and wave discharge and a behavioral absence. The thalamocortical circuit is implicated in absence epilepsy, yet roles for thalamus vs neocortex remain controversial, as do roles of different regulators of thalamocortical activity such as calcium channels and GABA receptors. This symposium will present several unexpected findings that challenge existing dogma and provide a state of the art update.

362. Advanced Molecular Imaging of Synapses in Health and Disease — CME

Mon. 1:30 PM - 4:00 PM — S406A

Chair: T. A. BLANPIED

Co-Chair: S. OKABE

This symposium will present new developments in imaging and proteomic technology and discuss how they are changing the way researchers characterize synaptic function and dysfunction. Presentations will reveal new insights from multiple scales of synaptic observation including nanoscale super-resolution imaging, time lapse *in vivo* imaging, and proximity tagging of endogenous proteins for mass spectrometric identification. From molecular screening to disease risk genes, speakers will propose new ways to understand disorders that alter neural circuit performance by disrupting synapses.

363. New Perspectives for the Rescue of Cognitive Disability in Down Syndrome — CME

Mon. 1:30 PM - 4:00 PM — S105

Chair: R. BARTESAGHI

Co-Chair: D. BIANCHI

Down syndrome is a relatively high-incidence genetic condition caused by the triplication of human chromosome 21. No therapies currently exist for the rescue of cognitive impairment in Down syndrome. This minisymposium will present exciting findings showing that it is possible to restore brain development and cognitive performance in mouse models of Down syndrome with therapies usable in humans. This knowledge provides a breakthrough for the cure and prevention of intellectual disability in Down syndrome.

MINISYMPOSIUM McCormick Place**364. Disrupted Sleep: From Molecules to Cognition — CME**

Mon. 1:30 PM - 4:00 PM — S103

Chair: E. J. W. VAN SOMEREN
Co-Chair: C. CIRELLI

Whereas it remains enigmatic whether neuroscience can ultimately define a single key function of sleep for all organisms, it is becoming clear that disruption of sleep interferes profoundly with their normal functioning. This minisymposium will present an integrated overview of compelling new evidence showing that sleep disruption leads to significant negative consequences for brain function across many different levels, ranging from molecules to cognition, with broad health implications.

MINISYMPOSIUM McCormick Place**365. The Medial Prefrontal Cortex: Emotional Regulation Across Species — CME**

Mon. 1:30 PM - 4:00 PM — S406B

Chair: H. F. CLARKE

The medial prefrontal cortex (mPFC) consists of multiple subregions that contribute differentially to emotional regulation and exhibit selective dysfunction in psychiatric disorders. However, uncertainty over functional homology across species hinders the translation of animal studies to those of humans. The presenters will highlight new insights into how mPFC subregions regulate emotion across three species: rodents, monkeys, and humans, and their relevance for our understanding of disease.

ALBERT AND ELLEN GRASS LECTURE McCormick Place**366. ● Receptors, Neurons, and Circuits: The Biology of Mammalian Taste — CME**

Mon. 3:15 PM - 4:25 PM — Hall B1

Speaker: C. ZUKER, *Howard Hughes Med. Institute, Columbia Univ.**Support contributed by:* *The Grass Foundation*

The taste system is one of our fundamental senses, responsible for detecting and responding to sweet, bitter, umami, salty, and sour stimuli. Zuker's laboratory studies the logic of taste coding as a platform to understand how our brain creates an internal representation of the outside world and transforms sensory signals at the periphery into percepts, actions, and behaviors.

PRESIDENTIAL SPECIAL LECTURE McCormick Place**367. ● Immune Mechanisms of Synapse Loss in Health and Disease — CME**

Mon. 5:15 PM - 6:25 PM — Hall B1

Speaker: B. A. STEVENS, *Boston Children's Hospital, Harvard Med. Sch.**Support contributed by:* *MedImmune, LLC*

How synapses are eliminated in the developing and diseased brain remains a mystery. During development, synaptic pruning is required for precise wiring and emerging evidence implicates immune-related molecules and immune cells called microglia. This talk will review research on how these pathways regulate the formation, refinement, and elimination of specific axons and synapses during development. The discoveries suggest ways of protecting synapses in neurodegenerative and psychiatric disorders involving synapse loss.

DYNAMIC POSTERS

DP05. Dynamic Posters–Monday Afternoon

Mon. 1:00 PM – McCormick Place, Hall A

All dynamic poster presentations will take place during the full four-hour session time. The theme of the dynamic poster being presented is indicated by the letter in the leftmost column.

- A DP01 **DP05.01** Diversity of human neuron profiles *in vitro*: Single-cell transcriptome, electrophysiology and morphology. *C. BARDY; M. VAN DEN HURK; B. KAKARADOV; J. A. ERWIN; B. JAEGER; R. V. HERNANDEZ; T. EAMES; M. GORRIS; E. SANTO; R. JAPPELI; J. BARRON; C. MARCHAND; A. BRYANT; M. KELLOGG; R. LASKEN; H. W. M. STEINBUSCH; G. YEO; F. H. GAGE. *Salk Inst., Maastricht Univ., Univ. of California San Diego, J. Craig Venter Inst.*
- A DP02 **DP05.02** Amyloid precursor protein dimerization modulates neuritogenesis. *L. LUU; L. J. VELLA; L. CHENG; A. F. HILL; L. MUNTER; G. MULTHAUP; G. D. CICCOTOSTO; R. CAPPALI. *Univ. of Melbourne, Inst. of Neurosci. and Mental Hlth., Bio21, Melbourne, Australia; McGill Univ.*
- D DP03 **DP05.03** Large-scale silicon probe recordings identify new cell types and gamma rhythm properties in the mouse superior colliculus. *S. ITO; D. A. FELDHEIM; A. M. LITKE. *Santa Cruz Inst. for Particle Physics, Molecular, Cell and Developmental Biol., Univ. of California, Santa Cruz.*
- D DP04 **DP06.04** The Allen Cell Types Database: Interactive multimodal exploration of neurons in the adult mouse brain. D. FENG; *S. M. SUNKIN; C. LAU; W. WAKEMAN; Y. LI; F. LONG; K. GODFREY; T. FLISS; R. YOUNG; F. LEE; G. GU; T. DOLBEARE; A. SODT; N. SJOQUIST; M. CHAPIN; N. HEJAZINIA; S. SHI; B. YOUNGSTROM; T. GILBERT; A. BERNARD; M. HAWRYLYCZ; H. ZENG; J. PHILLIPS; C. DANG; C. KOCH; L. - 1:00 T19 **426.01** Cerebellar dependent motor learning of predictive eye movements associated with velocity storage in human and fish. S. MIKI; R. BAKER*; Y. HIRATA. *Chubu Univ. Grad. Sch. of Engin., NYU Med. Ctr., Chubu Univ. Col. of Engin.*
- 2:00 T20 **426.02** Both brighter visual stimuli and hypergravity promote oculomotor neural integrator learning in goldfish. K. URASE; S. MIKI; R. BAKER; Y. HIRATA*. *Chubu Univ. Col. of Engin., Chubu Univ. Col. of Engin., New York Univ. Langone Med. Ctr.*
- 3:00 U1 **426.03** Topographical organization of physiologically distinct Purkinje cells in the larval zebrafish cerebellum and their contributions to learned movements. T. C. HARMON*; D. L. MCLEAN; I. M. RAMAN. *Northwestern Univ.*
- 4:00 U2 **426.04** Inferior olive projection to the zebrin II stripes in the flocculus of pigeons. D. WYLIE*; D. J. GRAHAM; J. R. CORFIELD; I. CRACIUN. *Univ. of Alberta, Lervig Aktiebryggeri, Univ. of Alberta.*
- 1:00 U3 **426.05** Plasticity of endocannabinoid signaling at parallel fiber synapses. R. D. HOWELL*; J. R. PUGH. *Univ. of Texas Hlth. Sci. Ctr. San Anto, Univ. of Texas Hlth. Sci. Ctr. San Antonio.*
- 2:00 U4 **426.06** Capturing graded climbing fiber bursts using calcium imaging. A. FANNING*; H. NISHIYAMA. *The Univ. of Texas at Austin.*
- 3:00 U5 **426.07** Thin spines increase in cerebellar Purkinje cells of rats during the fast period of motor learning. D. GONZÁLEZ-TAPIA; M. M. GONZÁLEZ-RAMÍREZ; N. VÁZQUEZ-HERNÁNDEZ; M. HERNÁNDEZ-GONZÁLEZ; I. GONZALEZ-BURGOS*. *Univ. Politécnica de la Zona Metropolitana de Guadalajara, Inst. Mexicano del Seguro Social, Univ. de Guadalajara.*
- 4:00 U6 **426.08** The role of potassium channels in generating timed purkinje cell responses in classical conditioning. J. F. JOHANSSON*; H. A. E. CARLSSON; G. HESSLÖW. *Lund Univ.*
- 1:00 U7 **426.09** Learning causes cerebellar granule cell representations to shift from sensation to action. A. GIOVANNUCCI*; F. NAJAFI; I. OZDEN; B. DEVERETT; A. D. KLOTH; J. F. MEDINA; S. S. WANG. *Princeton Univ., Princeton Univ., Univ. of Pennsylvania, Cold Spring Harbor Lab., Brown Univ., Rutgers Robert Wood Johnson Med. Sch., Univ. of North Carolina, Univ. of Pennsylvania.*
- 2:00 U8 **426.10** Climbing fibers encode a temporal difference error signal during eyeblink conditioning in mice. S. OHMAE*; J. F. MEDINA. *Univ. of Pennsylvania.*
- 3:00 U9 **426.11** Purkinje cell complex spikes provide an error signal when a monkey learns a sensorimotor association. A. E. IPATA*; A. W. KING; M. E. GOLDBERG. *Columbia Univ., Columbia Univ.*

Medicine, Keio Univ.</i>
2:00	U14	427.02	The Beta power suppression in early delay period reflects volatile state in updating action sequence in the primate medial motor complex. R. HOSAKA*; T. NAKAJIMA; K. AIHARA; Y. YAMAGUCHI; H. MUSHIAKE. <i>Fukuoka Univ., Tohoku Univ. Sch. of Med., Univ. of Tokyo, RIKEN, Tohoku university school of medicine.</i>	1:00	U25	427.13	Transient oscillations involved in ipsilateral and contralateral hand movements in the caudal cingulate motor area and supplementary motor area of monkeys. O. YOKOYAMA*; Y. NAKAYAMA; E. HOSHI. <i>Tokyo Metropolitan Inst. of Med. Sci., CREST, JST.</i>
3:00	U15	427.03	Mirror neurons reflect hidden state progressions during a reach, grasp, and manipulate task. K. A. MAZUREK*; M. H. SCHIEBER. <i>Univ. of Rochester.</i>	2:00	U26	427.14	Effects of volitional modulation of beta oscillations on reaching tasks. P. KHANNA*; J. M. CARMENA. <i>UC Berkeley.</i>
4:00	U16	427.04	Microstimulation of putative premotor cortical areas in the intact, awake cat evokes phase-dependent responses during locomotion. N. YAHAOUI*; N. FORTIER-LEBEL; T. NAKAJIMA; T. DREW. <i>Univ. De Montréal.</i>	3:00	U27	427.15	The influence of activating versus relaxing music on repetitive finger movement and associated motor cortical activity. E. L. STEGEMOLLER*; P. HIBBING; A. BRINKMAN; J. TATZ; B. KLINEDINST; P. FRICK. <i>Iowa State Univ., Drake Univ.</i>
1:00	U17	427.05	Characteristics of neuronal activity in putative premotor cortical areas of the cat during visually-guided locomotion. T. NAKAJIMA*; N. FORTIER-LEBEL; N. YAHAOUI; T. DREW. <i>Univ. de Montréal.</i>	4:00	U28	427.16	Functional transition between the dorsal premotor and primary motor cortex in macaque monkeys. M. DURET*; Y. HAO; A. RIEHLE; T. BROCHIER. <i>AMU-CNRS-Inst. Des Neurosciences De La Timone, Zhejiang Univ., RIKEN Brain Sci. Inst., Res. Ctr. Juelich-INM6.</i>
2:00	U18	427.06	Layer-specific inputs from the supplementary motor area and the dorsal premotor cortex to the primary motor cortex in macaques. T. NINOMIYA*; E. HOSHI; M. TAKADA. <i>Kyoto Univ., Core Res. for Evolutional Sci. and Technol., Frontal Lobe Function Project.</i>	1:00	U29	427.17	Cortical basis of abnormal muscle synergies after stroke. J. M. GODLOVE*; T. GULATI; B. DICHTER; E. CHANG; K. GANGULY. <i>Univ. California San Francisco.</i>
3:00	U19	427.07	Medial prefrontal cortex is differentially engaged in multiple aspects of sensorimotor integration in a delayed choice task. A. MOHEBI; M. MANSY; E. K. PURCELL; D. MILLER; K. G. OWEISS*. <i>Univ. of Michigan, Univ. of Florida, Michigan State Univ.</i>	2:00	U30	427.18	Motor cortex plasticity is not differentially modulated by skill and strength training. M. C. LEUNG*; W. TEO; T. RANTALAINEN; D. J. KIDGELL. <i>Deakin Univ., La Trobe Univ.</i>
4:00	U20	427.08	Strong coding of grasp force planning and execution in macaque areas F5 and AIP. R. W. INTVELD*; H. SCHERBERGER. <i>German Primate Ctr.</i>	3:00	U31	427.19	Corticospinal excitability during action observation is affected by the fluency of the observed movement. L. PEDULLÀ*; A. BISIO; L. AVANZINO; A. TACCHINO; G. BRICCHETTO; M. BOVE. <i>Univ. Di Genova, Fondazione Italiana Sclerosi Multipla.</i>
				4:00	U32	427.20	Development of hub network during planned behavior. J. CHOI*; H. KWON. <i>Max Planck Florida Inst.</i>

451. Computation: Tools (Other)

Theme G: Novel Methods and Technology Development

Mon. 1:00 PM – McCormick Place, Hall A

- 1:00 DD47 **451.01** ● Characterization of novel inhibitors for analog-specific protein kinase c delta. V. KUMAR*; G. WANG; Y. WENG; W. CHOU. *Kent State Univ.*
- 2:00 DD48 **451.02** Three dimensional cellular scale profiling of brain tissue surrounding implanted devices. M. MEGJHANI*; Y. LU; W. SHAIN; B. ROYSAM. *Univ. Of Houston, Seattle Children's Hosp.*
- 3:00 DD49 **451.03** Recording capacity of chronically implanted electrode in the peripheral nervous system: A human computational model. B. JEHENNE*; S. RASPOPOVIC; M. CAPOGROSSO; A. ARLEO; S. MICERA. *EPFL STI CPN TNE, institut de la vision, Ecole doctorale Frontieres du Vivant (ED474), Univ. Paris Descartes.*
- 4:00 DD50 **451.04** A novel computer vision method for automated human intracranial electrode localization and anatomical labeling. Z. GREENBERG*; E. CHANG. *Chang Lab, Univ. of California, San Francisco, Univ. of California, San Francisco.*
- 1:00 DD51 **451.05** The NEST neuronal network simulator: Performance optimization techniques for high performance computing platforms. A. PEYSER*; W. SCHENCK. *Forschungszentrum Jülich.*
- 2:00 DD52 **451.06** ● Biosimulation of neurotrophin signaling pathways in schizophrenia. C. F. PHELIX*; J. MORRIS; G. PERRY. *The Univ. of Texas San Antonio, The Univ. of Texas San Antonio.*
- 3:00 DD53 **451.07** Wavelet based analysis as a tool to evaluate the degree of neuronal insult in animal model of ischemic stroke. S. PAUL*; T. K. SINHA; P. BHATTACHARYA; A. K. PANDEY; R. PATNAIK. *North-Eastern Hill Univ. (NEHU), Indian Inst. of Technology, BHU, Computer Ctr. (NEHU), Leonard M. Miller Sch. of Med.*
- 4:00 DD54 **451.08** ● Evidence-based safety limits for transcranial direct current stimulation: State-of-the-art 2015. D. Q. TRUONG*; M. BIKSON; C. THOMAS; P. TOSHEV; A. MOURDOUKOUTAS. *City Col. of New York, CUNY.*
- 1:00 DD55 **451.09** Efficacy of an automated spike detection algorithm for processing *in vivo* multichannel recordings. E. RODRIGUEZ MANYARI*; D. GUGGENMOS; A. AVERNA; C. DUNHAM; G. VAN ACKER; R. NUDO; M. CHIAPPALONE. *Univ. of Kansas Med. Ctr., Univ. of Kansas, Univ. of Kansas Med. Ctr., Inst. Italiano di Tecnologia.*
- 2:00 DD56 **451.10** NeuronStitcher: A suite for stitching neuron fragments in serial 3D sections. H. CHEN*; Z. ZHOU; N. DA COSTA; L. LI; S. SORENSEN; H. ZENG; M. HAWRYLYCZ; E. LEIN; T. LI; H. PENG. *The Univ. of Georgia, Allen Inst. for Brain Sci.*
- 3:00 DD57 **451.11** Finding cortical patches of shared representations: A comparison of clustering algorithms on representational geometries, and the effect of cross-validation to reduce physiological noise. M. VISCONTI DI OLEGGIO CASTELLO*; S. A. NASTASE; M. I. GOBBINI; J. V. HAXBY; Y. O. HALCHENKO. *Dartmouth Col., Univ. of Bologna, Univ. of Trento.*
- 4:00 DD58 **451.12** The Myriad simulator: Parallel computation for densely integrated models. P. RITTNER; A. J. DAVIES; T. A. CLELAND*. *Cornell Univ.*
- 1:00 DD59 **451.13** Reliable quantal analysis from short recordings of synaptic responses. G. S. BHUMBRA*; M. BEATO. *UCL.*
- 2:00 DD60 **451.14** A neuromuscular system simulation tool for optimizing rehabilitative therapies for walking. I. PEREZ*; L. TONG; N. CARUSETTA; J. NATARAJ; G. DANESHGARAN; D. S. WON. *California State University, Los Angeles, UCLA.*
- 3:00 DD61 **451.15** Impact of TMS coil modeling detail on FEM simulation accuracy of the induced electrical field. P. PETROV*; B. NEGGER; S. MANDIJA; N. VAN DEN BERG. *Univ. Med. Ctr. Utrecht, Ctr. for Image Sci. Univ. Med. Ctr. Utrecht.*
- 4:00 DD62 **451.16** ▲ An improved algorithm for nociceptive signal identification in a closed-loop wireless neurostimulation system. G. GUPTE*; C. M. NGUYEN; X. YANG; J. C. CHIAO; Y. B. PENG. *Univ. of Texas At Arlington, Univ. of Texas At Arlington, Huazhong Univ. of Sci. and Technol., Univ. of Texas At Arlington.*
- 1:00 DD63 **451.17** A phase-locked loop oscillatory memory model for characterizing canine seizure electrocorticography data. K. M. HORECKA*; P. WATSON; R. RATNAM; N. COHEN. *Univ. of Illinois Urbana-Champaign, Beckman Inst. of Advance Sci. and Technology, Univ. of Illinois at Urbana-Champaign.*
- 2:00 DD64 **451.18** ICBM-NY: A highly detailed volume conductor model for EEG source localization and TCS targeting. Y. HUANG*; L. C. PARRA; S. HAUFE. *The City Col. of New York, Columbia Univ., Technische Univ. Berlin.*
- 3:00 DD65 **451.19** Assessing granger causality in electrophysiology: Unipolar vs. bipolar signals. B. NANDI*; A. TRONGNETRPUNYA; D. KANG; B. KOCSIS; C. SCHROEDER; M. DING. *Univ. of Florida, Gainesville, Harvard Med. Sch., Nathan S. Kline Inst. for Psychiatric Res.*
- 4:00 DD66 **451.20** Visualization and utilization of medical imaging atlas correction tools. J. L. FORBES*; R. E. KIM; J. S. PAULSEN; H. J. JOHNSON. *Univ. of Iowa, Univ. of Iowa.*
- 1:00 DD67 **451.21** An optimized C++ library for the design, simulation, and parameter tuning of biologically detailed spiking neural networks. M. BEYELER*; K. D. CARLSON; T. CHOU; N. DUTT; J. L. KRICHMAR. *Univ. of California, Irvine.*
- 2:00 DD68 **451.22** A processing pipeline for large-scale, multi-site diffusion MRI analysis. A. GHAYOOR*, H. JOHNSON. *The Univ. of Iowa.*
- 3:00 DD69 **451.23** Decoding and reconstructing movement direction using fMRI. S. NAM*; J. JUN; D. KIM. *Korea Advanced Inst. of Sci. and Technol.*
- 4:00 DD70 **451.24** ▲ Finite element method studies of electric field distributions in extracephalic structures by non-invasive stimulation techniques. A. MOURDOUKOUTAS*; M. BIKSON. *The City Col. of New York of the City Universit.*
